COMMERCIAL VEHICLE INSPECTION PROGRAM

TABLE OF CONTENTS

DEFINITIONS

Commercial Motor Vehicle-

(For purpose of the Minnesota Mandatory Inspection Program)

Commercial motor vehicle means a motor vehicle or combination of motor vehicles used to transport passengers or property if the motor vehicle:

(i) has a gross vehicle weight of more than 26,000 pounds;

(ii) is a vehicle in a combination of more than 26,000 pounds;

(iii) is a bus;

(iv) is of any size and is used in the transportation of hazardous materials that are required to be placarded under Code of Federal Regulations, title 49, parts 100-185;

(v) is a spotter truck.

Commercial Motor Vehicle does not include:

(i) a school bus or Head Start bus displaying a certificate under section 169.451;

(ii) a bus operated by the Metropolitan Council or by a local transit commission created in chapter 458A.

Commercial Motor Vehicle-

(Federal Definition)

Any self-propelled or towed vehicle used on public highways in interstate commerce to transport passengers or property when:

a. The vehicle has a gross vehicle weight rating or gross combination weight rating of 10,001 pounds or more;

b. is a bus;

c. transports hazardous material requiring placarding.

Gross Vehicle Weight

"Gross vehicle weight" means the **greater of:**

(1) the unloaded weight of a vehicle or the unloaded weight of a truck-tractor and semi-trailer combination, plus the weight of the load; or

(2) the value specified by the manufacturer as the maximum gross weight or gross vehicle weight rating (GVWR)

NOTE: DO NOT USE THE *REGISTERED GROSS WEIGHT*

Special mobile equipment

(a) "Special mobile equipment" means every vehicle not designed or used for the transportation of persons or property and only incidentally operated or moved over a highway, except vehicles described in paragraph (b). Special mobile equipment includes, but is not limited to: ditch-digging apparatuses, pump hoists and other water well-drilling equipment registered and licensed under chapter 103I, other road construction or road maintenance machinery, aggregate processing and conveying equipment, truck-mounted log loaders, that are used exclusively for commercial logging, and self-propelled cranes. (are not required to have a license plate)

(b) "Special mobile equipment" does not include: (1) machinery that has been temporarily or permanently mounted on a commercial motor vehicle chassis that is used only to provide a service and is not able to haul goods for resale; or (2) dump trucks.

Concrete pumps and street-sweeping vehicle

Concrete pumps and street-sweeping vehicle. The tax on vehicle mounted concrete pumps and street sweeping vehicles that are not registered under section 168.187 is 15 percent of the Minnesota base rate schedule. Vehicles registered under this subdivision must display plates from a distinctive series. These plates are light blue with black characters.

Implement of Husbandry

"Implement of husbandry" means a self-propelled or towed vehicle designed or adapted to be used exclusively for timber-harvesting, agricultural, horticultural, or livestock-raising operations. (not required to be inspected).

Spotter Truck : means a truck-tractor with a manufacturer's certificate of origin "not for on road use" specification, used exclusively for staging or shuttling trailers in the course of a truck freight operation or freight shipping operation.

Operation of a Spotter Truck: Notwithstanding any other law, a spotter truck may be operated on public streets and highways if:
(1) the operator has the appropriate class of driver's license;
(2) the vehicle complies with the size, weight, and load restrictions under this chapter;
(3) the vehicle meets all inspection requirements under section 169.781; and
(4) the vehicle is operated (i) within a zone of two air miles from the truck freight operation or freight shipping operation where the vehicle is housed, or (ii) directly to and from a repair shop, service station, or fueling station for the purpose of repair, servicing, or refueling.

Bus: means every motor vehicle **designed** for carrying more than 15 passengers including the driver and used for the transportation of persons**.**

Commerce: means the transportation of persons or property for a fee **(for hire carrier),** or the transportation of persons or property in the furtherance of another business **(private carrier)**.

390.3(f)(3) Exception. The occasional transportation of personal property by individuals not for compensation nor in the furtherance of a commercial enterprise.
390 interpretations

Question 21: Does the exemption in 390.3(f)(3) for the occasional transportation of personal property by individuals not for compensation nor in the furtherance of a commercial enterprise apply to persons who occasionally use CMV's to transport cars, boats, horses, etc., to races, tournaments, shows or similar events, even if prize money is offered at these events.

Guidance: The exemption would apply to this kind of transportation, provided: (1) the underlying activities are not undertaken for profit. i.e., (a) prize money is declared as ordinary income for tax purposes, and (b) the cost of the underlying activities is not deducted as a business expense for tax purposes; and, where relevant; (2) corporate sponsorship is not involved.

Highway: means any road, street, or way, whether on public or private property, open to public travel. "Open to public travel" means that the road section is available, except during scheduled periods, extreme weather or emergency conditions, passable by four-wheel standard passenger cars, and open to the general public for use without restrictive gates, prohibitive signs, or regulation other than restrictions based on size, weight, or class of registration. Toll plazas of public toll roads are not considered restrictive gates.

Intrastate Vehicle: means a vehicle used in commerce used only in one state and never crosses a state line.

Interstate Vehicle means a vehicle used in commerce, and crosses any state line, or will be crossing state lines.

Owner: means a person who owns, or has control, under a lease of more than 30 days' duration, of one or more commercial motor vehicles.

INTRASTATE and INTERSTATE USDOT NUMBER

Vehicles or a combination of vehicles with a GVW or CGVW of 10,001 pounds or more that are involved in commerce must have a USDOT number and the legal name or a single trade name of the motor carrier operating the self-propelled CMV, as listed on the motor carrier identification report (Form MCS-150)

Size, shape, location, and color of marking.

The marking must—

1) Appear on both sides of the self-propelled CMV;
2) Be in letters that contrast sharply in color with the background on which the letters are placed;
3) Be readily legible, during daylight hours, from a distance of 50 feet (15.24 meters) while the CMV is stationary; and
4) Be kept and maintained in a manner that retains the legibility required by (3) of this section.

This section does not apply to:

1) a farm truck that is used in intrastate commerce,
2) a vehicle that is not used in commerce, or
3) a vehicle that is owned and used solely in the transaction of official business by the federal government, the state, or any political subdivision.

Inspection Required

It is unlawful for a person to operate or permit the operation of the following vehicles in violation of the requirements.

- A Commercial Motor Vehicle registered in Minnesota
  (NOTE: this includes vehicles with a 21 day temporary registration permit)

- A Spotter Truck

- Special Mobile Equipment as defined in section 168.002, subdivision 31, and which is **self-propelled**, if it is mounted on a **commercial motor vehicle chassis**

A vehicle described above must display a valid safety inspection decal issued by an inspector certified by the commissioner.

NOTE: Fire trucks and emergency response vehicles which are not required to be registered and display license plates in Minnesota, are not required to be inspected and display an annual inspection decal.

Intrastate:

Self-propelled special mobile equipment mounted on a CMV chassis must be inspected and display an annual Minnesota MIP decal when the GVW is greater than 26,000 pounds, or when used in combination and the combined GVW is greater than 26,000 pounds.

Both units of a combination consisting of self-propelled special mobile equipment towing a registered vehicle must be inspected and display an MIP decal when the combined GVW is greater than 26,000 pounds.

Towed special mobile equipment that is not required to be registered is not required to be inspected and display an MIP decal.

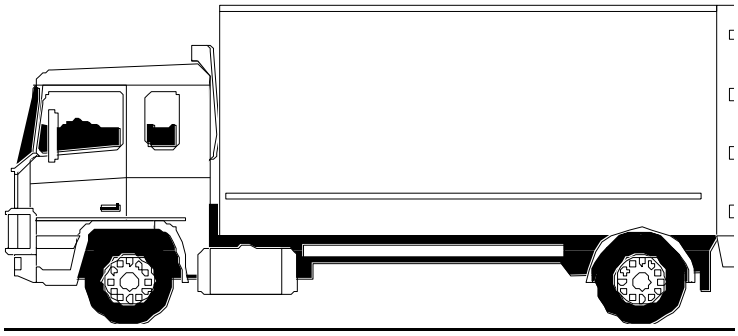
All special mobile equipment that does not meet the definition of a commercial vehicle must meet all the equipment requirements but are not required to have an inspection form or decal.

Interstate:

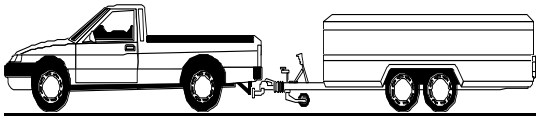
All vehicles with a Gross Vehicle Weight Rating or a combination of vehicles with a Combination Gross Weight Rating of 10,001 pounds or more, involved in interstate commerce must show proof that the vehicle or vehicles have passed an annual inspection. This would include all special mobile equipment.

VEHICLES REQUIRED TO BE INSPECTED BY MINNESOTA MIP

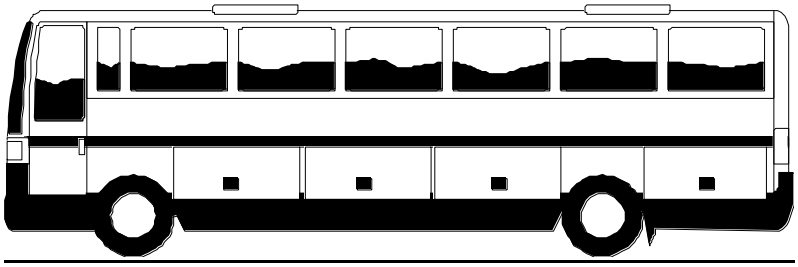
AND DISPAY A CURRENT DECAL



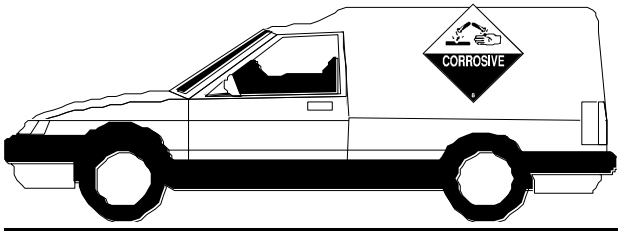
Single unit GVW greater than 26,000# (Includes Self Propelled Special Mobile Equipment



Combined GVW over 26,000# (Including Self Propelled Special Mobile Equipment)



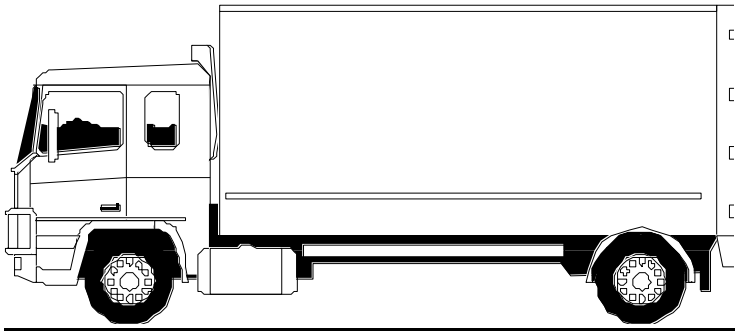
More than 15 passengers & driver



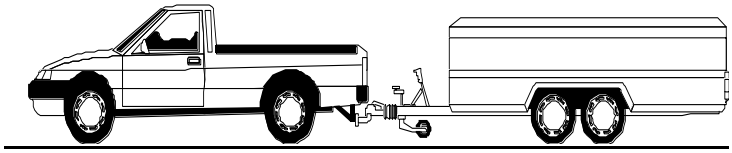
Any size required to be placarded

VEHICLES REQUIRED TO BE INSPECTED BY FEDERAL REGULATION

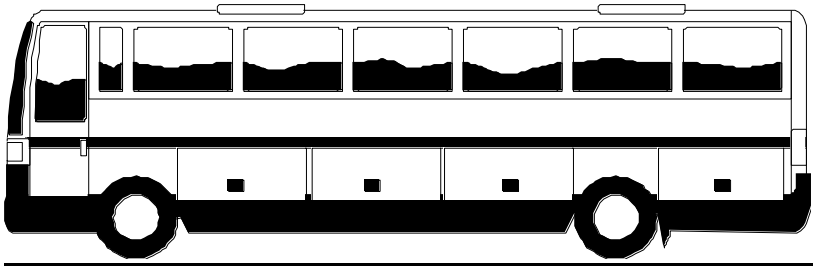
(Must be involved in interstate commerce)



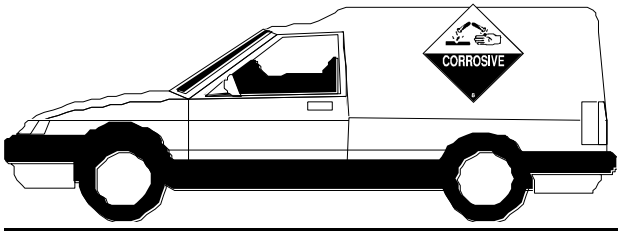
Single unit 10,001 # or more



Combination 10,001# or more



More than 15 passengers & driver



Any size required to be placarded

Who May Inspect

An inspection required by this section may be performed by a person who has been certified by the commissioner after having received training provided by the State Patrol or other training approved by the commissioner.

A person may be certified by the commissioner to conduct Minnesota annual inspections if the person is:

1) an owner, or employee of the owner, of one or more commercial motor vehicles that are power units;
2) a dealer licensed under section 168.27 and engaged in the business of buying and selling commercial motor vehicles, or an employee of the dealer;
3) engaged in the business of repairing and servicing commercial motor vehicles; or
4) employed by governmental agency that owns commercial vehicles.

NOTE**:** If you no longer meet the criteria above due to loss of job, layoff, etc., you cannot conduct Minnesota annual inspections.

Reminder: Inspectors are required to inform the State Patrol immediately of any changes of employment, business address, change of business name etc. (See page 83)

To qualify as a business of repairing and servicing commercial vehicles you must meet all of the following requirements.

1. Be in the business of repairing or servicing of commercial vehicles. This must be your primary business, not that you occasionally work on commercial vehicles.

2. Have a building or mobile repair vehicle. Both must be properly equipped to repair or service commercial vehicles.

3. Must advertise as a Commercial Vehicle repair business "OPEN TO THE PUBLIC". This would include a sign on or in front of the building, business phone number, and invoices with the business letterhead or logo. For a mobile repair vehicle there would have to be signs on the vehicle with the name of the business, address and phone number.

IF YOU DO NOT MEET ALL THE ABOVE REQUIREMENTS YOU ARE IN VIOLATION. ALL INSPECTIONS THAT YOU HAVE PERFORMED WOULD BE INVALID. YOUR CERTIFICATION MAY BE REVOKED, SUSPENDED, OR CANCELED.

Who May Inspect

Minnesota annual inspection certification is effective for two years from the date of certification. The commissioner may require biennial retraining of persons holding a certificate as a condition of renewal of the certificate.

A certified inspector may charge a reasonable fee for each inspection of a vehicle not owned by the person or the person's employer**.** Except as otherwise provided, the standards adopted by the commissioner for commercial motor vehicle inspections under section 169.781 to 169.783 must be the standards prescribed in 49 Code of Federal Regulations, section 396.17, *and* in chapter III, subchapter B, appendix G.

> NOTE: Certified inspectors must do the majority of their inspections at the place of business where they are employed. Certified inspectors may occasionally inspect other vehicles outside of their place of employment, i.e. vehicles owned by a relative, neighbor, or friend. However, this would not allow a person to start an inspection business. The liability for these inspections would lie with the inspector and if an inspection were not done properly, the inspector's certificate may be suspended or revoked. The inspector would lose the certification to perform any inspections, including at his primary place of employment.

Suspensions and Revocations

The commissioner, after notice and an opportunity for a hearing, may suspend a certificate for:

1) failure to meet biennial certification requirements prescribed by the commissioner**.** (must attend and pass a re-certification course prior to expiration of the certificate. If you do not, you will be suspended from doing inspections or purchasing decals).

2) failure to inspect commercial motor vehicles in accordance with inspection procedures established by the State Patrol.

   Examples: Failure to properly inspect vehicles, complete inspection reports, or application of the decal; fail to notify the State Patrol immediately of any change of employment, job change, etc.

The commissioner shall revoke a certificate if:

1) the commissioner determines after notice and an opportunity for a hearing that the certified person issued an inspection decal for a commercial motor vehicle when the person knew or reasonably should have known that the vehicle was in such a state of repair that it would have been declared OUT-OF-SERVICE if inspected by an employee of the State Patrol.

2) you do not attend and pass a re-certification course within 6 months of the expiration of your certification.

Suspension and revocation of certificates under this subdivision are not subject to sections 14.57 to 14.69 (right to trial by jury).

THREE-STRIKE RULE:

IF YOU ARE SUSPENDED OR REVOKED THREE TIMES, YOU WILL NO LONGER BE ELIGIBLE TO BE CERTIFIED AS AN ANNUAL INSPECTOR IN MINNESOTA.

Inspection Report

A person performing an inspection shall issue an inspection report to the owner of the commercial motor vehicle inspected. The report must include:

- the full name of the person performing the inspection, (clearly printed) and the inspector certification number;
- the name of the owner of the vehicle and, if applicable the U.S. DOT Number issued to the owner of the vehicle, or to the operator of the vehicle if other than the owner;
- the vehicle identification number (the entire VIN) and, if applicable, the license plate number;
- the date and location of the inspection;
- the vehicle components inspected and a description of the findings of the inspection, including identification of the components not in compliance with Minnesota Statutes and/or Federal Motor Carrier Safety Regulations (Appendix G); and
- the inspector's certification (SIGNATURE) that the inspection was complete, accurate, and in compliance with the requirements of this section**.**

Required Record Keeping

The OWNER of the vehicle must retain a copy of the inspection report for at least 14 months at a location in the state where the vehicle is domiciled or maintained.

The INSPECTOR must maintain (keep) a copy for 14 months following the inspection in a location in the state where the inspector conducts business. During this period the report must be available for inspection by an authorized federal, state, or local official.

Note: Although there is no requirement to keep a copy of the inspection report in the vehicle, it is recommended if the vehicle is going to be used in interstate commerce.

The commissioner shall prescribe the form of the inspection report and revise it as necessary to comply with state and federal law and regulations

.

Only the official form shall be used

GUIDELINES FOR THE INSPECTION REPORT

1. **INSPECTION DATE:** Enter month, day and year; i.e., January 01,2009; 01/01/2009
2. **INSPECTION LOCATION:** Enter street address, or enter a physical description.
3. **TIME INSPECTION WAS COMPLETED:** Enter time inspection was completed (include AM/PM).
4. **DECAL NUMBER:** Enter serial number of decal placed on vehicle.
5. **VEHICLE MAKE:** Enter manufacture name, (Use same abbreviation that is on cab card).
6. **MODEL YEAR:** Enter model year of vehicle (using two digits only; i.e., 1999 enter only 99).
7. **UNIT NUMBER:** Enter company assigned unit number.
8. **ODOMETER READING :** Enter "H" for Hub; "C" for Cab and 7 digits(i.e.; C 1,357,897). If odometer does not work make a note, such as "inoperative."
9. **VIN NUMBER:** Enter the complete vehicle identification number taken from vehicle identification plate.
10. **LICENSE NUMBER:** Enter vehicles base state license plate number including all letters and numbers.
11. **STATE:** Enter state of base license plate (use standard two letter abbreviation).
12. **OWNER OF VEHICLE:** Enter name of owner of vehicle
13. **OWNER STREET ADDRESS:** Owner's business address.
14. **OWNER CITY, STATE, ZIP:** Enter Owner's city, state, and zip

For special mobile equipment, if there is not a make or a VIN number, enter the type of vehicle (such as cement mixer). The carrier should assign a unit number to the vehicle.

15. **CARRIER NAME:** Enter full name of the carrier or entity operating the vehicle as determined from shipping documents, log book, vehicle registration, cab card, etc. If leased vehicle use name of the lessee. Abbreviations are not to be used unless proper legal name of the entity is abbreviated.
16. **CARRIER STREET ADDRESS:** Enter the full address, city and zip where the carrier's home office or headquarters is located.
17. **CARRIER CITY, STATE, ZIP:** Enter two digits for state abbreviation of the carrier's home office or headquarters.
18. **OWNER USDOT NUMBER:** Enter U.S. DOT number assigned to owner if applicable.
19. **CARRIER USDOT NUMBER:** Enter U.S. DOT number assigned to carrier if applicable. (A vehicle does not fail an inspection if it does not have a USDOT number.)
20. **INSPECTOR'S NAME:** Print inspector's name.
21. **INSPECTOR NUMBER:** Enter assigned certification inspector number.

NOTE: After inspecting each item listed, **initial** the appropriate box (pass, fail or N/A). For any item not required or not present, mark N/A (Not Applicable). If **all** items pass after completing the inspection, sign the form and enter inspector's number. Place the decal number in Box #4. Affix decal to vehicle inspected at proper location.

DO NOT SIGN THE INSPECTION FORM OR ENTER INSPECTORS NUMBER IF VEHICLE DOES NOT PASS.

Inspector Signature _____

This is the only vehicle inspection form approved by the Minnesota State Patrol. (2008-9)

GUIDELINES FORVEHICLE INSPECTION REPORT INFORMATION FORM

This form is required to be completed and attached to the inspector's copy of the inspection report on all inspections. This form, along with the inspection report, must be retained by the inspector for 14 months, and must be available for inspection by enforcement personnel.

All portions of the form must be completed, unless the item is not applicable to the vehicle being inspected. In those cases N/A (not applicable) shall be entered; including:

THE DATE

THE TIME INSPECTION WAS COMPLETED

THE VEHICLE'S LICENSE NUMBER

THE NUMBER OF THE DECAL THAT WAS APPLIED TO THE VEHICLE

INSPECTOR'S NAME (PRINTED)

BRAKE CHART- Enter the brake chamber type, size, design, and measured brake stroke.
Chamber type and size can be entered as:
Clamp = **C**
Roto Chamber =**R**
Bolt = **B**
Wedge = **W**
Air Disc = **AD**
Hydraulic brakes on an axle, enter **(H),** electric brakes, enter **(E)**
If you have a Clamp Type 30 chamber, you could enter it on the form as **(C-30)**.
If you have a LONG STROKE chamber, you would enter **(C - 30L) (C-24L3)**.
Or, if you have a Wedge Brake you could just put **(W)** in the box for chamber size and type.
In the box for push rod stroke, enter the actual measurement you recorded when measuring the push rod stroke.

TIRE CHART- In the appropriate boxes, enter the **tire size** for each tire, and the minimum (lowest) major **tread depth** measurement that you can find on each tire; and the **tire pressure** for each tire.

STEERING- Enter the steering wheel diameter and the measured free play.

FIFTH WHEEL- Enter play at any of the three required measuring points on the fifth wheel assembly.

SEMI-TRAILER USED FOR FIFTH WHEEL PLAY- Enter the trailer license number and state.

TRACTOR PROTECTION VALVE- Enter pressure at which tractor protection valve activates.

SAFETY DEVICES- Circle the type of safety device, and enter the size and grade of device.

SURGE BRAKES- If inspecting a trailer with surge brakes, enter the license number and GVWR of the towing vehicle used for the inspection, and the license number and GVWR of the trailer.

BUS & MOTOR COACH EMERGENCY EXITS AND PUSHOUT WINDOWS- Initial Yes box if inspected, tested and passed.

Replacement of MIP Decal

You may replace a valid damaged or destroyed MIP decal without re-inspecting the vehicle only if you performed the original inspection. You MAY NOT replace any other decal. Record the replacement decal, date, and license number in your inspection decal log. In column 4, record the serial number of the destroyed decal. Punch the month of the original inspection on the replacement decal, and attach the decal in the proper location.

Inspection Decals

A person inspecting a commercial motor vehicle shall issue an inspection decal for the vehicle if each inspected component of the vehicle complies with the Federal Motor Carrier Safety Regulations.

- The decal must state that in the month specified on the decal the vehicle was inspected and each inspected component complied with federal motor carrier safety regulations.
- The decal is valid for 12 months after the month specified on the decal.
- The commissioners of Public Safety and Transportation shall make decals available, at a fee of not more than $2 for each decal, to persons certified to perform inspections.

Important: Decals are issued to inspectors by serial number and are **not transferable.**

Minnesota inspection decals SHALL NOT be affixed to motor vehicles bearing license plates from another state or jurisdiction.

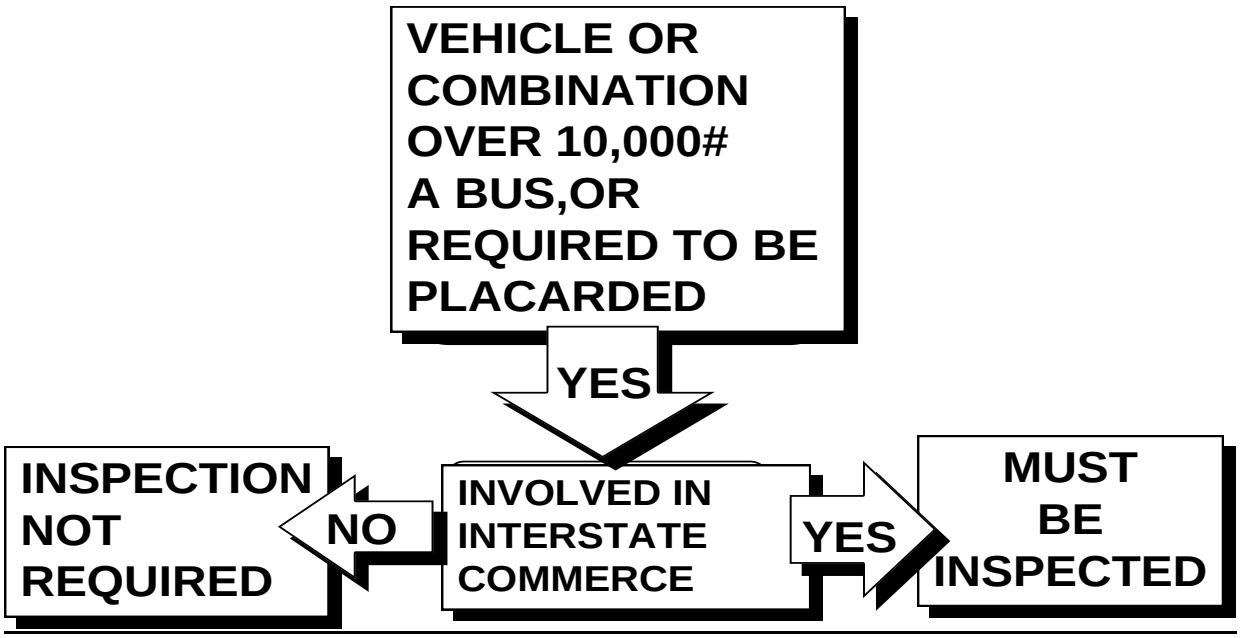
Reviews; Random Inspections; Audits

Employees of the State Patrol and motor transportation representatives of the Department of Transportation may review records required to be kept under subdivision 4, paragraph (b), and conduct random vehicle inspections and audits at the facility of an owner of a commercial motor vehicle.

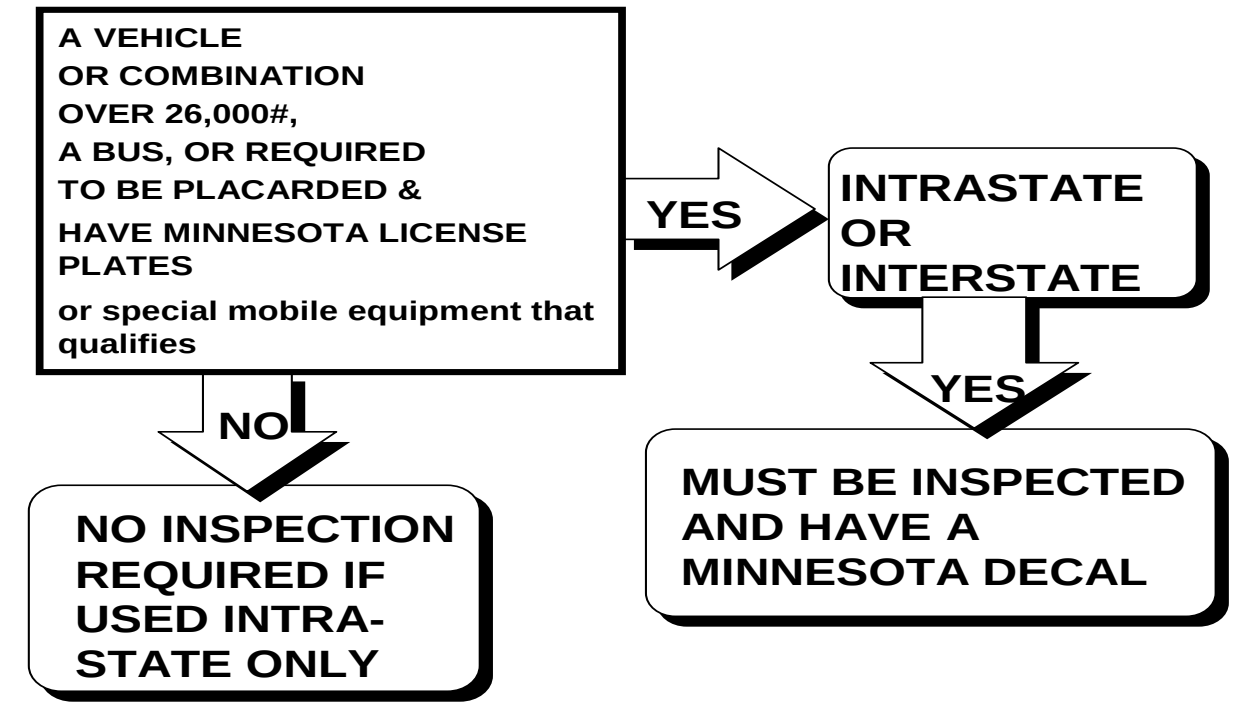
Violations and Penalties

A violation of the annual inspection statutes is a misdemeanor and punishable by a fine of up to $1000 and/or 90 days in jail.

FEDERAL INSPECTION (396.17)

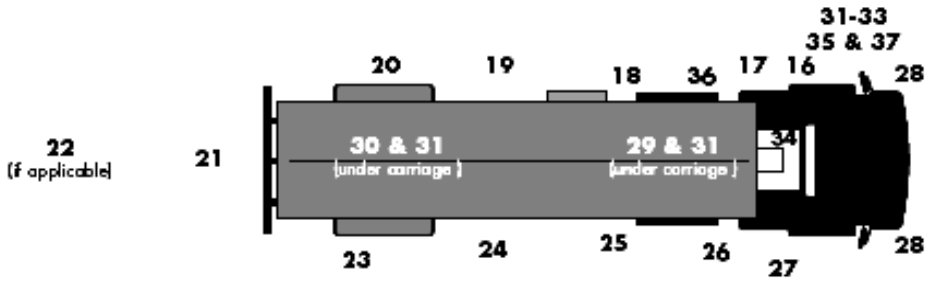


MINNESOTA MANDATORY INSPECTION



YOU MUST HAVE A GOOD PROCEDURE

It will save you time
Less chance of missing inspection items
If you get interrupted you will know where to continue
Overall it will make you a better inspector



STEP 14 Inspect Front of Tractor
- Check headlamps and turn signals (do not use four way flashers to check turn signals) for improper color, operation, mounting, and visibility.
- Check windshield wipers for improper operation (two wipers are required unless one can clean the driver's field of vision).

STEP 15 Inspect Left Front Side of Tractor
- Check left front wheel, rim, hub, and tire.

STEP 16 Inspect Left Saddle Tank Area
- Check left fuel tank area.
- Check exhaust system.

STEP 17 Inspect Trailer Front
- Check air and electrical lines.

STEP 18 Check Left Rear Tractor Area
- Check wheels, rims, hubs, tires.
- Check lower fifth wheel.
- Check upper fifth wheel.
- Check sliding fifth wheel.
- Check lamps.

Caution: Never place yourself in between tires of tandem axles.

STEP 19 Inspect Left Side of Trailer
- Check frame and body.
- Check condition of hoses.
- Check van and open-top trailer bodies.
- Check cargo securement.

STEP 20 Inspect Left Rear Trailer Wheels
- Check wheels, rims, hubs, and tires.
- Check sliding tandem.

STEP 21 Inspect Rear of Trailer
- Check tail, stop, turn signals, and lamps on projecting loads.
- Check cargo securement.

STEP 22 Inspect Double and Triple Trailers
- Check safety devices: full trailers/converter dollies.
- Check the safety devices (chains/wire rope) for sufficient number, missing components, improper repairs, and devices that are incapable of secure attachments. Inspect pintle hook, eye and drawbar for cracks, excessive movement, and improper repairs.

STEP 23 Inspect Right Rear Trailer Wheels
- Check as in step 20.

STEP 24 Inspect Right Side of Trailer
- Check as in step 19.

STEP 25 Inspect Right Rear Tractor Area
- Check as in step 18.

STEP 26 Inspect Right Saddle Tank Area
- Check as in step 16.

STEP 27 Inspect Right Front Side of Tractor
- Check as in step 15.

STEP 28 Inspect Steering Axle
- Check steering system (both sides).
- Check front suspension (both sides).
- Check front axle.
- Check frame and frame assembly.
- Check front brakes (both sides).
- Check and mark push rods (both sides).

Note: Inform the driver that you are going under the vehicle. Enter the under carriage in view of the driver. (At front of power unit, rear of power unit, and in front of trailer axle(s).

STEP 29 Inspect Axles 2 and/or 3 (Under Carriage of CMV)
- Suspension (both sides).
- Brake components (both sides).
- Mark all pushrods on "S" cam brakes (both sides).
- Exit under carriage in view of driver.

STEP 30 Inspect Axles 4 and/or 5
- Same as step 29.

STEP 31 Check Brake Adjustment
- Ensure air pressure is 90–100 p.s.i.
- Have driver fully apply brakes and hold.
- Measure and record all push rod travel.
- Identify size and type of brake chambers.
- Ensure brake lining to drum contact.

STEP 32 Test Air Loss Rate
- Apply brakes while the engine is idling, the governor has cut in, and pressure is 80–90 p.s.i.

STEP 33 Test Low Air Pressure Warning Device
- Observe dash gauges while ignition is "on" and the driver is pumping the foot valve to approximately 55 p.s.i.

STEP 34 Inspect Tractor Protection System [This procedure tests both the tractor protection valve and the emergency brakes.]
- Have driver release brakes and disconnect both brake lines.
- Full brake application.

STEP 35 Check Steering Wheel Lash
- Measure steering wheel lash while wheels are straight and the engine is running.

STEP 36 Check Fifth Wheel Movement
- Prepare the driver and vehicle.
- Check for excessive movement.

Caution: If conducted improperly, this method of checking for fifth-wheel movement can result in serious damage to the vehicle. Use caution and instruct the driver carefully.

STEP 37 Complete the Inspection
- Complete documentation.
- Conclude with driver.
- Follow correct and current OOS procedures (if applicable).
- Issue CVSA decal (if applicable).

Commercial Vehicle Safety Alliance
1101 17th St., NW, Suite 803, Washington, DC 20036 • Phone: 202-775-1623 • Fax: 202-775-1624 • www.cvsa.org
Promoting Commercial Motor Vehicle Safety and Security

A VEHICLE DOES NOT PASS AN INSPECTION IF IT HAS ANY OF THE FOLLOWING DEFECTS OR DEFICIENCIES:

Appendix "G"

Brake System

Brakes should not be adjusted before starting the inspection.

NOTE: If brakes are present they must work and be inspected

Brakes on lift axles need not be capable of being operated while the lift axle is raised. However, brakes on lift axles must be capable of being applied whenever the lift axle is lowered and the tires contact the roadway. These brakes MUST BE inspected, so it may be necessary to lower the axle to complete the inspection.

Trailers with a gross vehicle weight of 3,000 lbs. or more are required to have brakes on all wheels.

Breakaway brakes are required on all trailers required to be equipped with brakes.

Service Brakes

1. Absence of braking action on any axle required to have brakes upon application of the service brakes (such as missing brakes or brake shoe(s) failing to move upon application of a wedge S-cam, cam, or disc brake).

2. Missing or broken mechanical components including: shoes, lining pads, springs, anchor pins, spiders, cam rollers, push-rods, and air chamber mounting bolts.

   Note: Vehicles manufactured after October 20, 1994, must be equipped with automatic slack adjusters and they must be maintained.

3. Loose brake components including air chambers, spiders, and cam shaft support brackets.

4. Audible air leak at brake chamber (Example -ruptured diaphragm, loose chamber clamp, etc.).

5. Readjustment limits. Any brake found to be at or beyond the adjustment limit. The maximum stroke at which brakes should be readjusted is given on pages 26 and 27.

MEASURING BRAKE PUSH ROD STROKE

Before going under vehicle, make sure:

- Wheels are chocked
- All brakes are released
- Air pressure is between 90 and 100 psi

Determine size and type of air chamber

- Mark pushrod(s) at chamber housing
- Measure from chamber housing to center of clevis pin, or
- Measure from chamber housing to locking nut

Return to cab of vehicle and check:

- Air pressure is between 90 and 100 psi
- Have person in cab make one full brake application and hold it

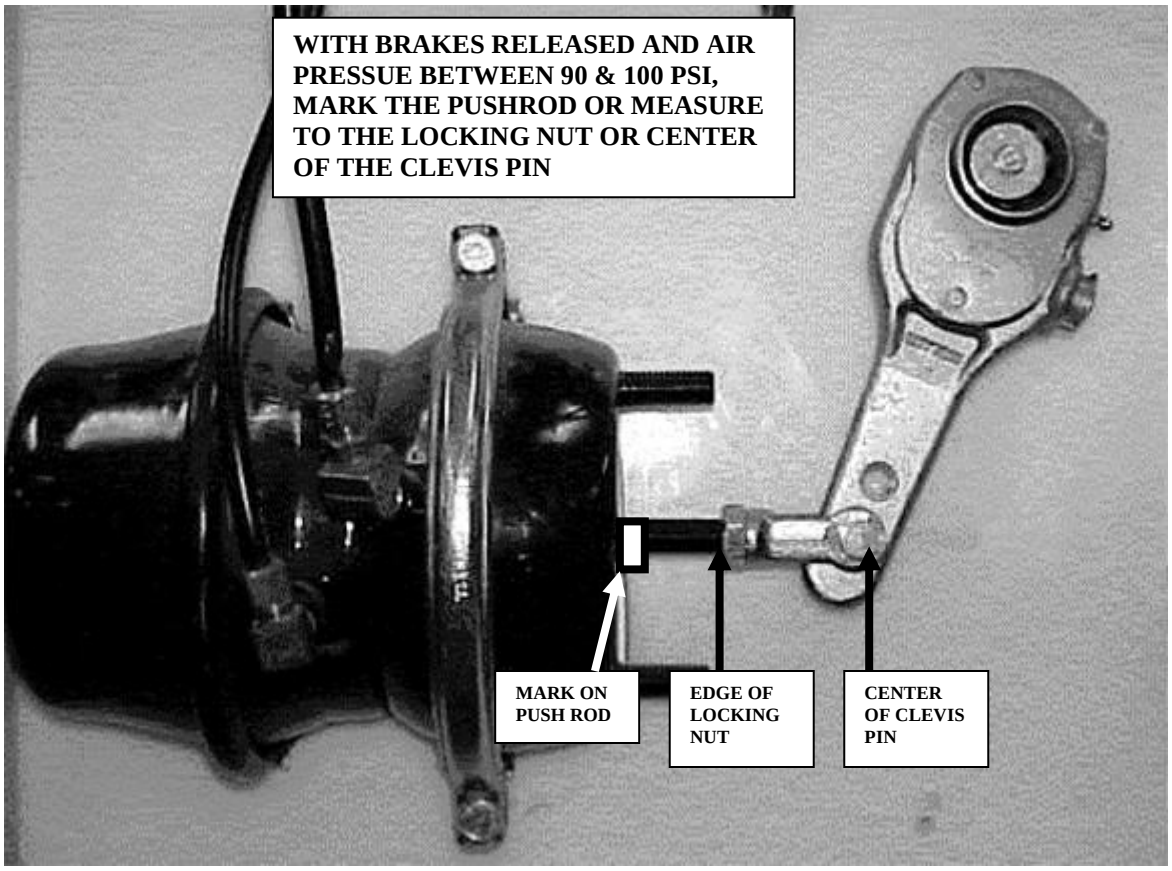
Measure applied stroke on all chambers

- Measure pushrod stroke from chamber housing to mark
- Take second measurement to center of clevis pin, or
- Take second measurement to locking nut

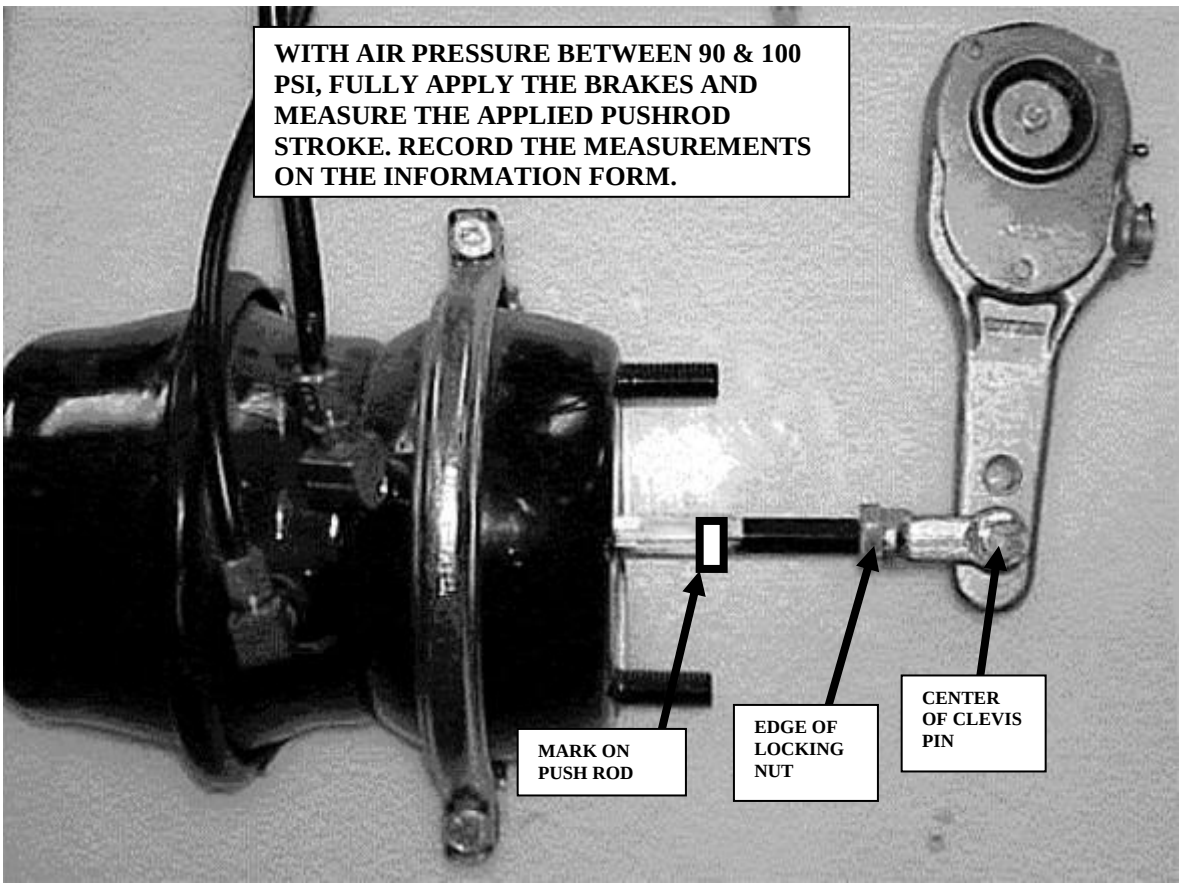
Record all data and measurements on Information Form

Use chart to determine brake adjustment limit

Any brake found to be at or beyond the adjustment limit shall be rejected



WITH BRAKES RELEASED AND AIR PRESSUE BETWEEN 90 & 100 PSI, MARK THE PUSHROD OR MEASURE TO THE LOCKING NUT OR CENTER OF THE CLEVIS PIN
MARK ON PUSH ROD
EDGE OF LOCKING NUT
CENTER OF CLEVIS PIN



WITH AIR PRESSURE BETWEEN 90 & 100 PSI, FULLY APPLY THE BRAKES AND MEASURE THE APPLIED PUSHROD STROKE. RECORD THE MEASUREMENTS ON THE INFORMATION FORM.
MARK ON PUSH ROD
EDGE OF LOCKING NUT
CENTER OF CLEVIS PIN

Pushrod stroke shall be measured with engine off and the reservoir pressure at 90 to 100 psi with brakes fully applied.

Attention: ***Any brake AT the adjustment limit shall be cause for rejection.***

CLAMP TYPE BRAKE CHAMBER DATA

TYPE	OUTSIDE DIAMETER	BRAKE ADJUSTMENT LIMIT
6	4 1/2 (114mm)	1 1/4 (32mm)
9	5 1/4 (133mm)	1 3/8 (35mm)
12	5 11/16 (145mm)	1 3/8 (35mm)
16	6 3/8 (162mm)	1 3/4 (45mm)
20	6 25/32 (172mm)	1 3/4 (45mm)
24	7 7/32 (184mm)	1 3/4 (45mm)
30	8 3/32 (206mm)	2 (51mm)
36	9 (229mm)	2 1/4 (57mm)

'LONG STROKE' CLAMP TYPE BRAKE CHAMBER DATA

TYPE	OUTSIDE DIAMETER	BRAKE ADJUSTMENT LIMIT
12	5 11/16 (14.5cm)	1 3/4 (4.5cm)
16	6 3/8 (162mm)	2.0 (51mm)
20	6 25/32 (172mm)	2.0 (51mm)
20L3*	6 25/32 (172mm)	2.5 (63.5 mm)
→ 24L	7 7/32 (184mm)	2.0 (51mm)
→ 24L3*	7 7/32 (184mm)	2.5 (64mm)
30	8 3/32 (206mm)	2.5 (64mm)
*For 3" maximum stroke type 24 chambers		

→ **Note:** Long Stroke Chambers will have a square port, will be stamped, and/or will have a trapezoidal plastic tag. *However, the **Type 24L** might only be **stamped** and may not have any other indicators.*

TIE ROD STYLE PISTON BRAKE CHAMBER DATA

SIZE	OUTSIDE DIAMETER	BRAKE ADJUSTMENT LIMIT
30	6 1/2 (165mm)	2.5 (64mm)

BOLT TYPE BRAKE CHAMBER DATA

TYPE	OUTSIDE DIAMETER	BRAKE ADJUSTMENT LIMIT
A	6 15/16 (176mm)	1 3/8 (35mm)
B	9 3/16 (234mm)	1 3/4 (45mm)
C	8 1/16 (205mm)	1 3/4 (45mm)
D	5 1/4 (133mm)	1 1/4 (32mm)
E	6 3/16 (157mm)	1 3/8 (35mm)
F	11 (279mm)	2 1/4 (57mm)
G	9 7/8 (251mm)	2 (51mm)

ROTOCHAMBER DATA

TYPE	OUTSIDE DIAMETER	BRAKE ADJUSTMENT LIMIT
9	4 9/32 (109mm)	1 1/2 (38mm)
12	4 13/16 (122mm)	1 1/2 (38mm)
16	5 13/32 (138mm)	2 (51mm)
20	5 15/16 (151mm)	2 (51mm)
24	6 13/32 (163mm)	2 (51mm)
30	7 1/16 (180mm)	2 1/4 (57mm)
36	7 5/8 (194mm)	2 3/4 (70mm)
50	8 7/8 (226mm)	3 (76mm)

DD-3 BRAKE CHAMBER DATA

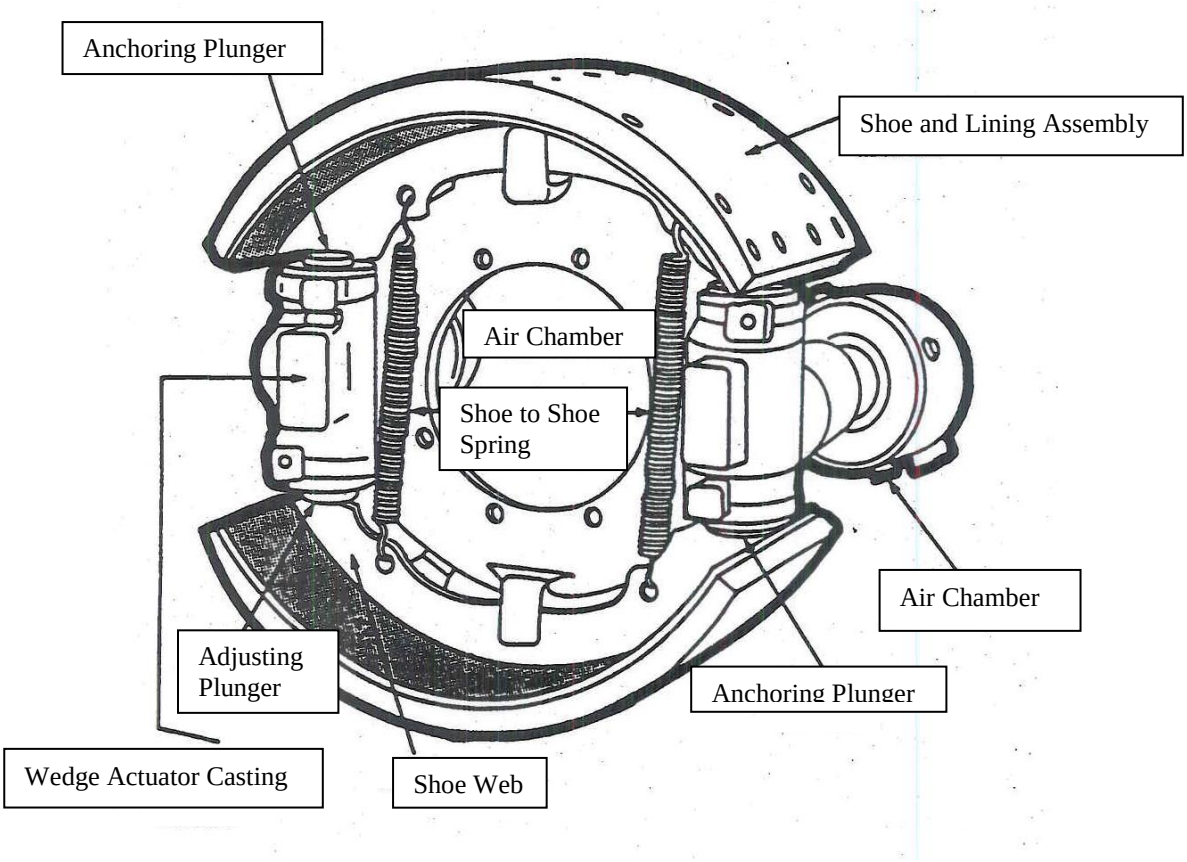
TYPE	OUTSIDE DIAMETER	BRAKE ADJUSTMENT LIMIT
30	8 1/8 (206mm)	2 1/4 (57mm)

NOTE: This chamber has three air lines and is found on motor coaches.

6. Wedge Brakes

Brake lining travel shall not exceed 1/16 inch

Inspect Wedge Brake adjustment:
With the inspection hole cover removed from the brake dust shield, check the adjustment at each wheel visually or using a feeler gauge.



WEDGE BRAKE

With the brakes fully released, inspect the distance from the drum to the brake shoe (lining surface). This distance must not exceed 1/16 of an inch. If using a feeler gauge, the gap must not exceed .0625

If the edge of the lining is not visible, mark the lining and then apply the brakes. When the brake shoe moves, watch the mark or measure the movement with a gauging device. Any brake shoe travel beyond 1/16 (.0625) of an inch is excessive.

Failure of the brake shoes to move is a condition of improper maintenance.

7. **Brake linings or pads**

a. Lining or pad is not firmly attached to the shoe;

b. Saturated with oil, grease, or brake fluid; or

c. Steering axle brakes. The brake lining/pad thickness on the steering axle of a truck, truck-tractor or bus shall not be less than **4.8 mm (3/16 inch)** at the shoe center for a shoe with a continuous strip of lining; less than **6.4 mm (1/4 inch)** at the shoe center for a shoe with two pads; or worn to the wear indicator if the lining is so marked, for air drum brakes. The steering axle brake lining/pad thickness shall not be less than **3.2 mm (1/8 inch)** for air disc brakes, or **1.6 mm (1/16 inch)** or less for hydraulic disc, drum and electric brakes.

d. Non-steering axle brakes. An air braked commercial motor vehicle shall not be operated with brake lining/pad thickness less than **6.4 mm (1/4 inch)** or to the wear indicator if the lining is so marked (measured at the shoe center for drum brakes); or less than **3.2 mm (1/8 inch)** for disc brakes. Hydraulic or electric braked commercial motor vehicles shall not be operated with a lining/pad thickness less than **1.6 mm (1/16 inch)** (measured at the shoe center) for disc or drum brakes.

NOTE: For cracked brake linings and pads, look on Page 23 under "missing or broken components"

BRAKE LININGS – STEERING AXLES

AIR DRUM BRAKES:

LESS THAN 4.8mm (3/16 inch) at shoe center for a shoe with a continuous strip of lining.

LESS THAN 6.4mm (1/4 inch) at the shoe center for a shoe with two pads

OR WORN TO THE WEAR INDICATOR IF THE LINING IS SO MARKED

AIR DISC BRAKES:

LESS THAN 3.2 mm (1/8 inch)

HYDRAULIC DISC, DRUM AND ELECTRIC BRAKES:

AT 1.6 mm (1/16 inch) OR LESS

BRAKE LININGS – NON-STEERING AXLES

AIR DRUM BRAKES:

LESS THAN 6.4 mm (1/4 inch) (measured at the shoe center for drum brakes)
OR WORN TO THE WEAR INDICATOR IF THE LINING IS SO MARKED

AIR DISC BRAKES:

LESS THAN 3.2 mm (1/8 inch)

HYDRAULIC AND ELECTRIC BRAKES:

LESS THAN 1.6 mm (1/16 inch)

8. Missing Brakes

Missing brakes on any axle required to have brakes.

Exceptions: three axle trucks or truck tractors manufactured before July 25, 1980 are not required to have brakes on the front wheels.
(If brakes are present, they must work or all brake parts must be removed)

9. Mismatch Brakes

- Brake chambers. The service brake chambers and spring brake chambers on each end of an axle must be the same size.

- Slack adjusters. The effective length of the slack adjuster on each end of an axle must be the same.

10. Parking Brake System

Hydraulic-braked vehicles The parking brake shall be capable of holding the vehicle or combination of vehicles stationary under any condition of loading in which it is found on a public road (free of ice and snow).

Air-braked power units manufactured on or after March 1, 1975, and air-braked trailers manufactured on or after January 1, 1975. Each air-braked bus, truck and truck tractor manufactured on and after March 1, 1975, and each air-braked trailer except an agricultural commodity trailer, converter dolly, heavy hauler trailer or pulpwood trailer, shall be equipped with a parking brake system as required by FMVSS No. 121 (S5.6) in effect at the time of manufacture. The parking brake shall be capable of holding the vehicle or combination of vehicles stationary under any condition of loading in which it is found on a public road (free of ice and snow). An agricultural commodity trailer, heavy hauler or pulpwood trailer shall carry sufficient chocking blocks to prevent movement when parked.

Agricultural commodity trailer. A trailer that is designed to transport bulk agricultural commodities in off-road harvesting sites and to a processing plant or storage location, as evidenced by skeletal construction that accommodates harvest containers, a maximum length of 28 feet, and an arrangement of air control lines and reservoirs that minimizes damage in field operations.

Heavy Hauler Trailer: A trailer which has one or more of the following characteristics, but which is not a container chassis trailer:
(1) Its brake lines are designed to adapt to separation or extension of the vehicle frame; or
(2) Its body consists only of a platform whose primary cargo-carrying surface is not more than 1,016 mm (40 inches) above the ground in an unloaded condition, except that it may include sides that are designed to be easily removable and a permanent "front-end structure" as that term is used in §393.106 of this title.

Pulpwood Trailer: A trailer or semitrailer that is designed exclusively for harvesting logs or pulpwood and constructed with a skeletal frame with no means for attachment of a solid bed, body, or container.

11. Brake Drums or Rotors

a. With any external crack or cracks that open upon brake application (do not confuse short hairline heat check cracks with flexural cracks).

b. Any portion of the drum or rotor missing or in danger of falling away.

The thickness of the drums or rotors shall not be less than the limits established by the brake drum or rotor manufacturer. Drum/rotor removal is not required. Note on Information Sheet if drums/rotors were not measured.

12. Brake Hose

a. Hose with any damage extending through the outer reinforcement ply. (Rubber impregnated fabric cover is not a reinforcement ply). Thermoplastic nylon may have braid reinforcement or color difference between cover and inner tube. Exposure of second color is cause for rejection.

b. Bulge or swelling when air pressure is applied.

c. Any audible leaks.

d. Two hoses improperly joined (such as a splice made by sliding the hose ends over a piece of tubing and clamping the hose to the tube).

e. Air hose cracked, broken or crimped.

13. Brake Tubing

a. any audible leak.

b. cracked,

c. damaged by heat,

d. broken or

e. crimped

14. Low Pressure Warning Device

a. is missing,

b. inoperative, or

c. does not operate at 55 psi and below, or one-half the governor cut-out pressure, whichever is less.

** After March 1, 1975 must have a VISUAL warning device

Audible warning device is not required unless the visual warning device is not within the driver's forward field of view.

15. Tractor Protection Valve

Inoperable or missing tractor protection valve(s) on power unit.

NOTE: Any vehicle that is equipped to tow a trailer with air brakes must have a tractor protection valve installed on it

Inspection Procedure for the Tractor Protection Valve

Make sure that the wheels are chocked.

Air pressure should be at normal operating pressure.

All brakes must be released. (All buttons in, hand brake released)

Disconnect both gladhands (be careful when disconnecting the supply/emergency gladhand as contaminants and air may harm inspector.) Set glad hands on frame of tractor.

There are two types of Tractor Protection Valves; *flow sensitive* and *pressure sensitive*.

Test Procedures:

1. Flow Sensitive

- Air must stop at no less than 20 psi
- After air stops, check air pressure and record
- Place your thumbs over both gladhands and have an assistant apply the service brake. If any air escapes from either gladhand, the vehicle fails.

2. Pressure Sensitive

- Air will keep bleeding out of the supply (emergency) gladhand; let it bleed until it stops.
- Air must stop at no less than 20 psi
- After air stops, check air pressure and record
- Place your thumbs over both gladhands and have an assistant apply the service brake. If any air escapes from either gladhand, the vehicle fails.

NOTE: Also check trailer gladhand connection to make sure there is no bleed-back of trailer air.

IMPORTANT: If at any time during the test, the spring brakes fully apply on the towing unit, the vehicle fails.

BREAKAWAY BRAKING REQUIREMENTS FOR TRAILERS.

Every trailer required to be equipped with brakes shall have brakes which apply automatically and immediately upon breakaway from the towing vehicle. With the exception of trailers having three or more axles, all brakes with which the trailer is required to be equipped must be applied upon breakaway from the towing vehicle. The brakes must remain in the applied position for at least 15 minutes.

CHECKING BREAKAWAY BRAKES

AIR BRAKES- Checking these brakes can be done in conjunction with checking of the tractor protection valve. When the emergency/supply hose and service hose are disconnected from the trailer, all required breakaway brakes must immediately activate. Inspectors must verify application of the breakaway brakes on all required axles.
NOTE: Breakaway brakes in the applied position should have approximately the same measurement as the applied service brake measurements.

VACUUM OVER HYDRAULIC-disconnect the two vacuum lines to the trailer, and verify the required breakaway brakes are applied.

AIR OVER HYDRAULIC- this would be checked the same way as the air brake system. Disconnect the hoses from the truck to the trailer, and verify the required breakaway brakes are applied.

ELECTRIC BRAKES- **When checking this system, the light cord must be unplugged to prevent damage to the brake controller.** With the light cord unplugged, pull the pin from the breakaway brake switch. Verify the required breakaway brakes are applied. After verifying breakaway brake function, replace pin in switch.

If you are not sure about the proper brake application on any of the wheels it is suggested that you jack up the wheels, spin them, and then apply the breakaway brake.

16. Air Compressor.

a. Compressor drive belts in condition of impending or probable failure.
b. Loose compressor mounting bolts.
c. Cracked, broken or loose pulley.
d. Cracked or broken mounting brackets, braces or adapters.

17. Electric Brakes.

a. Absence of braking action or any wheel required to have brakes.
b. Missing or inoperable breakaway braking device.

Inspection item on electric brakes:

1. Magnets for improper wear
2. Drums- both pad contact area and armature area
3. Brake linings for contamination and wear
4. Pivot arms
5. Wiring and connections
6. Bearings

Inspection items for Breakaway Brakes:

1. Breakaway switch - properly mounted on the trailer draw-bar/tongue
2. Switch pin and cable-no defects, cable strong enough to pull the pin
3. Battery and connections-battery fully charged, proper connections

18. Hydraulic Brakes.
(including Power Assist over Hydraulic and Engine Drive Hydraulic Booster).

Brake application must be tested with the engine running <u>and</u> with the engine off

a. Master cylinder less than 1/4 full.
b. No pedal reserve with engine running except by pumping pedal.
c. Power assist unit fails to operate.
d. Seeping or swelling brake hose(s) under application of pressure.
e. Missing or inoperative check valve.
f. Has any visually observed leaking hydraulic fluid in the brake system.
g. Has hydraulic hose(s) abraded (chafed) through outer cover-to-fabric layer.
h. Fluid lines or connections leaking, restricted, crimped, cracked or broken.
i. Brake failure or low fluid warning light on and/or inoperative. **<u>(Dual master cylinder)</u>**

To test Brake Failure Warning Light: Start the engine. As you turn the key, the brake light should appear on the dash. Once the engine starts and you release the key, the light should go out. If the light does not come on, or if the light stays on after the engine starts, the vehicle fails.

Note: Brake Failure Warning Light may also be used as the parking brake indicator. If the light stays on, ensure the parking brake is released.

SURGE BRAKES ON TRAILERS

FMCSA allows the use of surge brakes on trailers with the following conditions

(1) A trailer with a gross vehicle weight rating (GVWR) of 12,000 lbs or less, provided its GVWR does not exceed 1.75 times the GVWR of the towing vehicle, or

(2) A trailer with a GVWR greater than 12,000 lbs, but less than 20,001 lbs, provided the GVWR does not exceed 1.25 times the GVWR of the towing vehicle.

Examples:
1/2 Ton pickup GVWR 6,400 lbs: (6,400 x 1.75= 11,200) max trailer GVWR= 11,200 lbs
3/4 Ton pickup GVWR 8,700 lbs: (8,700 x 1.75= 15,225) max trailer GVWR= 12,000 lbs
Truck with a GVWR 15,000 lbs: (15,000 x 1.25= 18,750) max trailer GVWR= 18,750 lbs

Surge brake trailers that do not meet the above requirements are in violation and would fail the inspection and not be issued a decal.

NOTE: The inspector must list the GVWR for both the power unit and the trailer on the Inspection Information Form.

SURGE BRAKE INSPECTION:

The master cylinder reservoir must not be less than ¼ full.

Lines and hoses must not be crimped, cracked, seeping, or torn.

There must be no leaks.

The actuator should not be bent or rusted or have any defect that would hinder smooth movement.

Brake pads/linings must not be saturated with grease, oil, or brake fluid.

Brake lining must have adequate thickness.

Drums must not have cracks or missing pieces.

Breakaway Brakes: Cable or chain must be in good condition and strong enough to apply the brakes. The cable or chain must be attached to the towing vehicle at a location other than the hitch or safety chains.

TESTING SURGE BRAKES:

This requires two people.

Have the driver drive the vehicle forward at a walking speed and stop quickly. The inspector should walk beside the vehicle and observe the trailer tongue and brake actuator. When the vehicle stops, the actuator should pivot or slide and show resistance pressure. Once the vehicle stops, the actuator should release. If the actuator does not move or moves all the way forward without resistance, the brakes are not working.

TESTING BREAKAWAY BRAKES (on trailer with surge brakes):

Pull the breakaway brake lever forward until it locks. Have the driver attempt to drive forward. The brakes should be applied. (NOTE: To release some breakaway brakes, you may need a screwdriver to lift up a spring-loaded plate under the lever.)

1. Vacuum Systems.

Any vacuum system which:

a. Has insufficient vacuum reserve to permit one full brake application after engine is shut off.

b. Has vacuum hose(s) or line(s) restricted, abraded (chafed) through outer cover to cord ply, crimped, cracked, broken or has collapse of vacuum hose(s) when vacuum is applied.

c. Lacks an operative low-vacuum warning device as required.

2. Antilock Braking System

Vehicles required to be equipped with ABS:

- Truck-Tractors with air brake systems manufactured on or after March 1, 1997
- All other Commercial Vehicles with air brakes manufactured on or after March 1, 1998
- Trucks and Buses with hydraulic brake systems manufactured on or after March 1, 1999

All ABS systems must be equipped with a malfunction indicator. If the ABS malfunction indicator fails to operate or remains on after the start up test is complete, the vehicle fails the inspection

ABS is not required on:

- Any vehicle equipped with an axle that has a gross axle weight rating (GAWR) of 29,000 pounds or more
- Heavy haul trailer with GVWR of more than 120,000 pounds
- Any load divider dolly

BRAKE ADJUSTMENT EXERCISE

II. COUPLING DEVICES

Fifth Wheel

NOTE: TO INSPECT FOR FIFTH WHEEL SECUREMENT AND PLAY, A SEMI-TRAILER MUST BE USED, AND THE TRAILER LICENSE PLATE NUMBER OR VIN MUST BE RECORDED ON THE INFORMATION SHEET.

21. Mounting to frame

a. Any fasteners missing or ineffective.

b. Any movement between mounting components.

c. Any mounting angle iron cracked or broken.

22. Mounting plates and pivot brackets

a. Any fasteners missing or ineffective.

b. Any welds or parent metal cracked.

c. More than 3/8 inch horizontal movement between pivot bracket pin and bracket.

d. Pivot bracket pin missing or not secured.

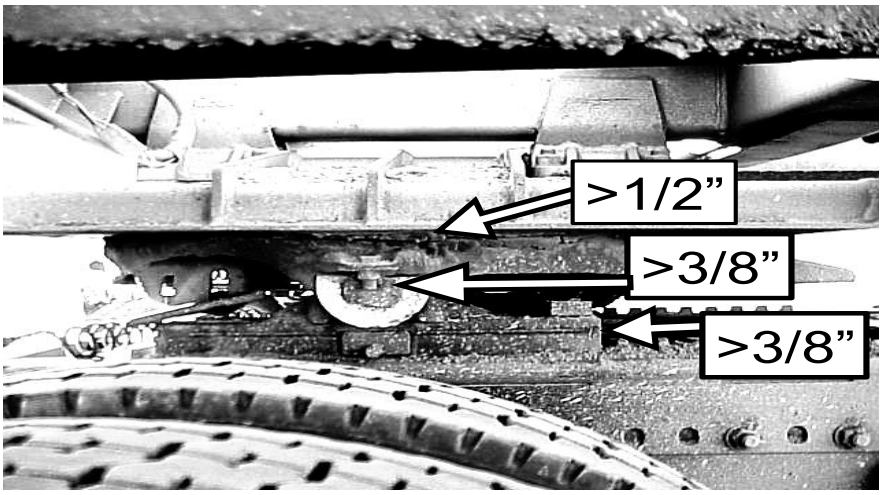
23. Sliders

a. Any latching fasteners missing or ineffective.

b. Any fore or aft stop missing or not securely attached.

c. Movement more than 3/8 inch between slider bracket and slider base.

d. Any slider component cracked in parent metal or weld.



24. Lower Coupler

a. Horizontal movement between the upper and lower fifth wheel halves exceeds 1/2 inch.
b. Operating handle not in closed or locked position.

c. Kingpin not properly engaged.

d. Separation between upper and lower coupler allowing light to show through from side to side.

e. Cracks in the fifth wheel plate.

Exceptions: Cracks in fifth wheel approach ramps and casting shrinkage cracks in the ribs of the body of a cast fifth wheel.

f. Locking mechanism parts missing, broken, or deformed to the extent the kingpin is not securely held.

Upper Coupler

Must have the minimum Number of bolts per side based on the size and grade of bolt used.

Minimum Number of Bolts per Side Based on Type & Size** of Bolt						
Maximum Trailer GVWR	ASTM A325 Type 1,2 & 3 (Metric 5.8)		SAE J429 Grade 5 (Metric 8.8)		SAE J429 Grade 8 (Metric 10.9)	
	1/2" (12mm)	5/8" (16mm) or larger	1/2" (12mm)	5/8" (16mm) or larger	1/2" (12mm)	5/8" (16mm) or larger
68,000 lbs (30,844 kg) or less	6	4	6	4	5	4
68,001 - 85,000 lbs (30,845 - 38,555 kg)	8	5	8	5	7	5
85,001 - 105,000 lbs (38,556 - 47,627 kg)	10	6	10	6	8	5

** *Bolt size refers to the outside diameter of the thread.*
- *1/2 inch bolts have 3/4 inch heads and nuts*
- *5/8 inch bolts have 15/16 inch heads and nuts*
- *12mm bolts have 19mm heads and nuts*
- *16mm bolts have 24mm heads and nuts*

BOLT HEAD GRADE IDENTIFICATION MARKINGS

ASTM A325 Type 1	ASTM A325 Type 2	ASTM A325 Type 3	SAE J429 Grade 5	SAE J429 Grade 8	Metric 5.8	Metric 8.8	Metric 10.9
A325	A325	A325			5.8	8.8	10.9

Pintle Hook

25. Mounting to frame

a. Any missing or ineffective fasteners (a fastener is not considered missing if there is an empty hole in the device but no corresponding hole in the frame or vice versa).

b. Mounting surface cracks extending from point of attachment (e.g., cracks in the frame at mounting bolt holes).

c. Loose mounting.

d. Frame cross member providing pintle hook attachment cracked.

26. Integrity

a. Cracks anywhere in pintle hook assembly.

b. Any welded repairs to the pintle hook.

c. Any part of the horn section reduced by more than 20 percent.

d. Latch insecure.

Drawbar/Towbar Eye

27. Mounting

a. Any cracks in attachment welds.

b. Any missing or ineffective fasteners.

28. Integrity

a. Any cracks.

b. Any part of the eye reduced by more than 20 percent.

c. No welded repairs.

Drawbar/Towbar Tongue

29. Slider (power or manual)

a. Ineffective latching mechanism.

b. Missing or ineffective stop.

c. Movement of more than 1/4 inch between slider and housing.

d. Any leaking, air or hydraulic cylinders, hoses, or chambers (other than slight oil weeping normal with hydraulic seals).

30. Integrity

a. Any cracks.

b. Movement of 1/4 inch between subframe and drawbar at point of attachment.

Ball hitches: Inspect for the following items:

a. Ball mount not bent, cracked, worn
b. Ball not loose
c. Hitch assembly has proper weight rating for trailer
d. Ball mount and receiver size match
e. Positive locking mechanism on coupler
f. Receiver not bent, cracked, worn

SAFETY DEVICES (SAFETY CHAIN REQUIREMENTS)

ALL TRAILERS, INCLUDING GOOSE-NECK STYLE, MUST HAVE SAFETY DEVICE(S) UNLESS THEY HAVE A KINGPIN AND FIFTH WHEEL HITCH.

31. Safety devices

a. missing.
b. unnattached
c. incapable of secure attachment.

32. Chains and hooks

a. Worn to the extent of measurable reduction in link cross section.
b. Improper repairs including welding, wire, small bolts, rope and tape.

33. Cable

a. Kinked or broken cable strands.
b. Improper clamps or clamping.

Safety device requirements

1. Cannot be attached to any part of the hitch.

2. Only enough slack in safety device as needed make turns.

3. The ultimate breaking strength of safety devices must be equal to the weight of the trailer and load.

Working Load Limits (WLL), Chain

Size mm (inches)	WLL in kg (pounds)				
	Grade 30 proof coil	**Grade 43 high test**	**Grade 70 transport**	**Grade 80 alloy**	**Grade 100 alloy**
7 **(1/4)**	580 **(1,300)**	1,180 **(2,600)**	1,430 **(3,150)**	1,570 **(3,500)**	1,950 **(4,300)**
8 **(5/16)**	860 **(1,900)**	1,770 **(3,900)**	2,130 **(4,700)**	2,000 **(4,500)**	2,600 **(5,700)**
10 **(3/8)**	1,200 **(2,650)**	2,450 **(5,400)**	2,990 **(6,600)**	3,200 **(7,100)**	4,000 **(8,800)**
11 **(7/16)**	1,680 **(3,700)**	3,270 **(7,200)**	3,970 **(8,750)**		
13 **(1/2)**	2,030 **(4,500)**	4,170 **(9,200)**	5,130 **(11,300)**	5,400 **(12,000)**	6,800 **(15,000)**
16 **(5/8)**	3,130 (**6,900)**	5,910 **(13,000)**	7,170 **(15,800)**	8,200 **(18,100)**	10,300 **(22,600)**
Chain Mark Examples:					
Example 1	**3**	**4**	**7**	**8**	**10**
Example 2	**30**	**43**	**70**	**80**	**100**
Example 3	**300**	**430**	**700**	**800**	**1000**

To figure the ultimate (breaking) strength for safety chains multiply the working load limit (WLL) times three.

3 X (WLL) = ULTIMATE STRENGTH/BREAKING STRENGTH

EXAMPLE:
The ULTIMATE STRENGTH of two ¼ " grade 4 (high test) safety chains would be= 2,600 (WLL)
X3
ULTIMATE STRENGTH = 7,800
(ADD THE 2 SAFETY CHAINS TOGETHER) +7,800
(TOTAL STRENGTH OF THE SAFETY CHAINS 15,600

OTHER REQUIREMENTS:

- Must be installed in a manner that will prevent the draw-bar from contacting the roadway if it becomes disconnected from the towing unit.
- Attachment to the towed vehicle (two safety devices) one on each side and equal distance of the center line of the towing vehicle. (Bridle arrangement, single attachment point) must be attached on the center line of the towing vehicle.
- If trailer is equipped with a pivoting draw-bar, the safety chain or cable must be attached to the trailer frame or axle as far apart as practicable and must be one continuous length to attachment point on towing vehicle.

Figure 1 - Inspect All Links for Gouges, Chips, Cuts, and Abrasion

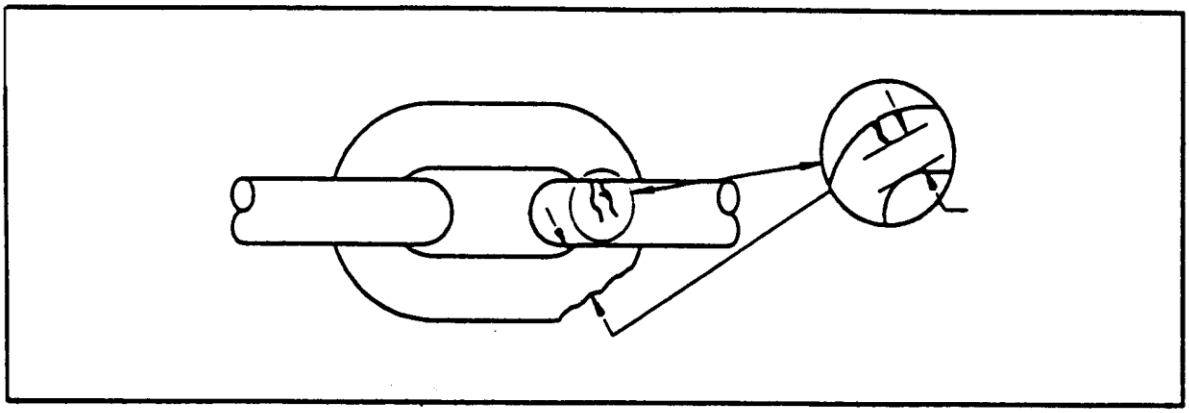


Figure 2 - Inspect All Links for Wear at the Bearing Surfaces

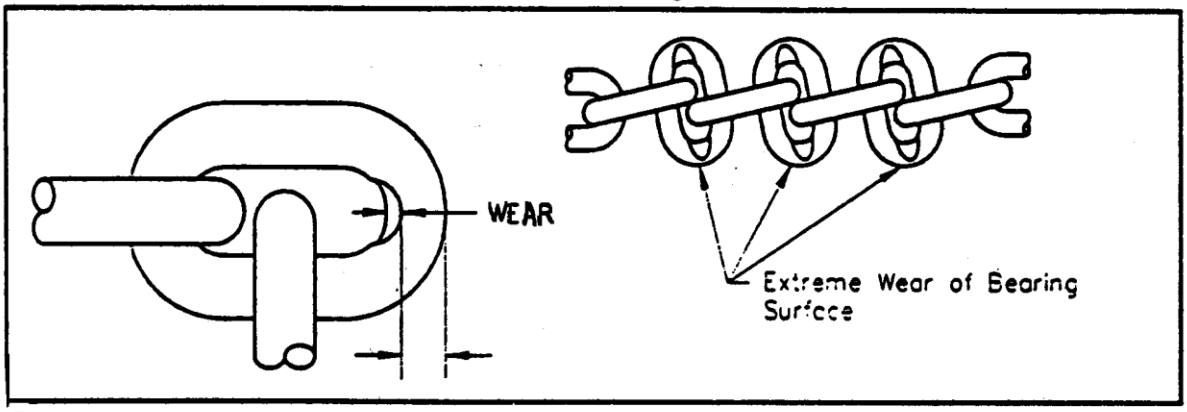

Figure 3 - Never Twist or Knot a Chain

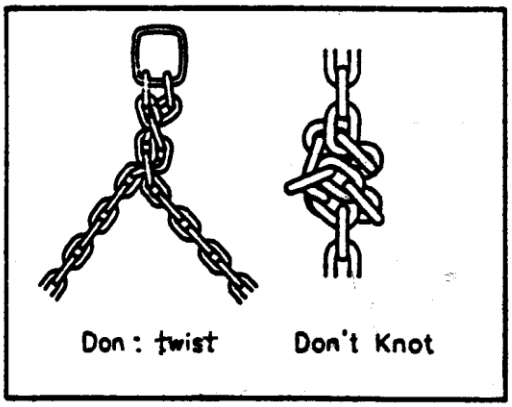

Figure 4 - Look for Chain Stretch During Inspections

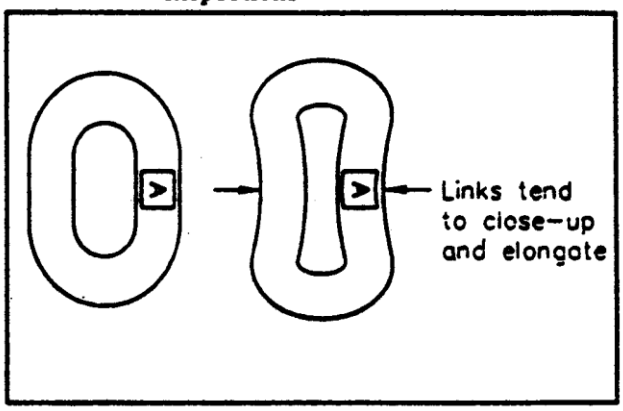

Figure 5 - Inspect All Links for Bends, Twists, and Damage

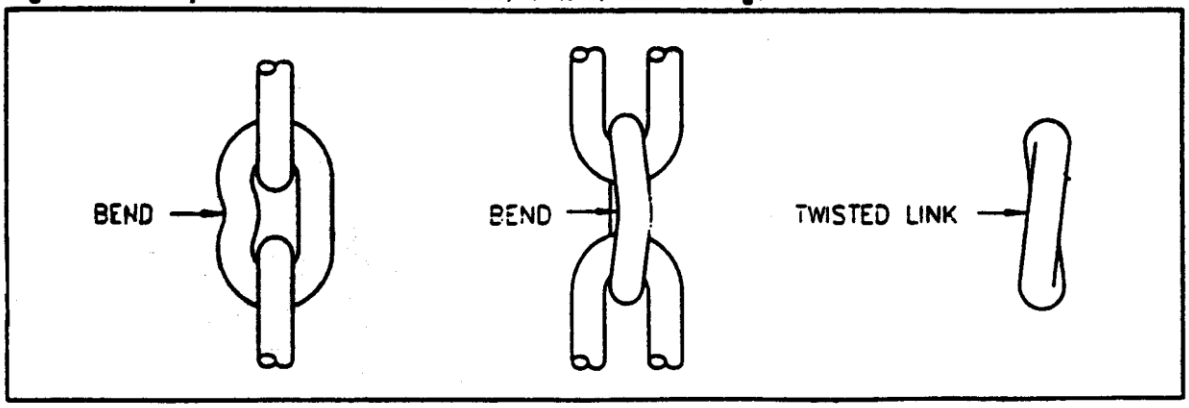

Figure 6 - Approved Type of Repair Links

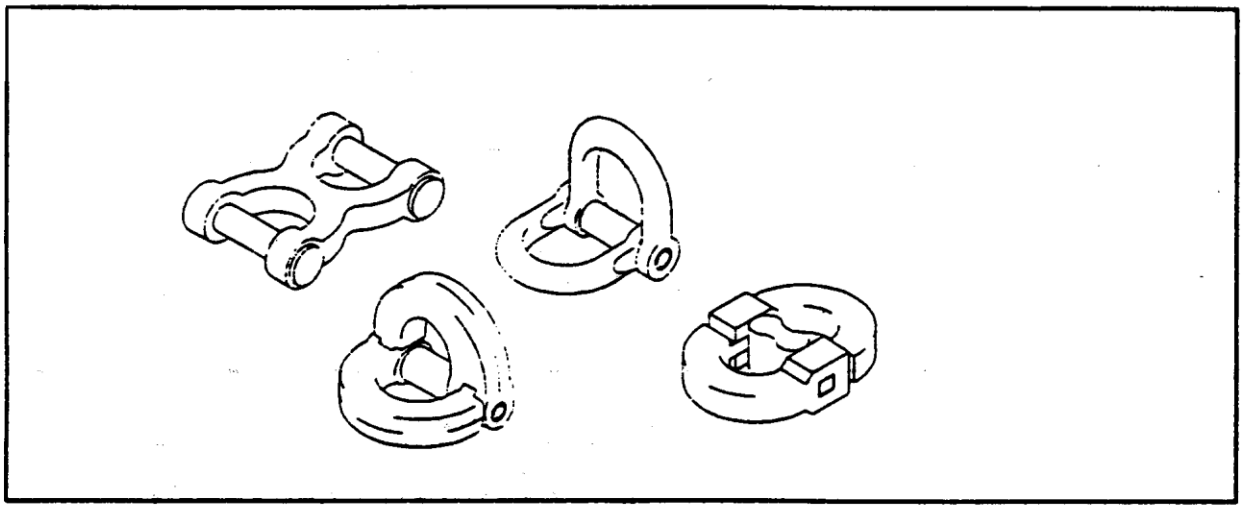

Figure 7 - Prohibited for All Applications

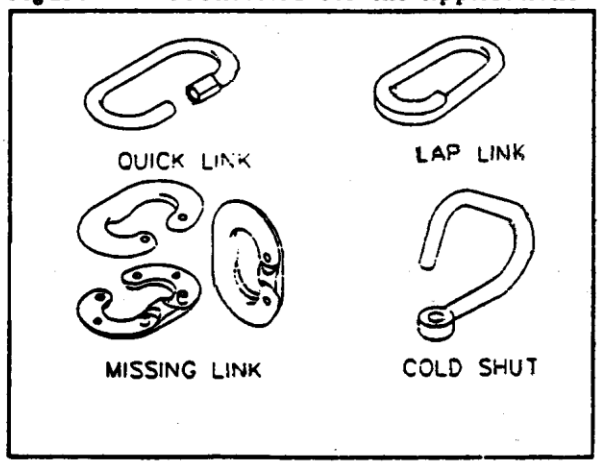

Figure 8

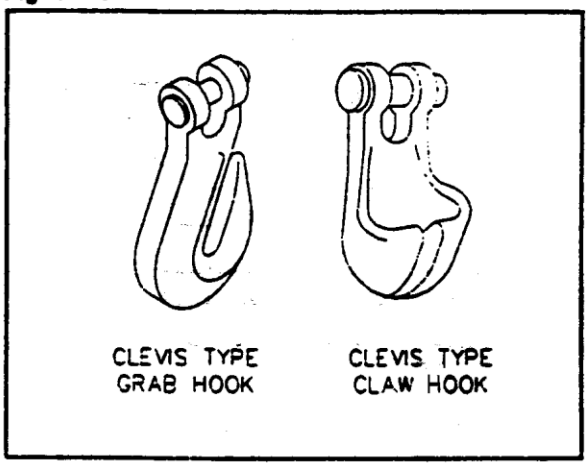

Figure 9 - Typical Rope Damage (Frayed)

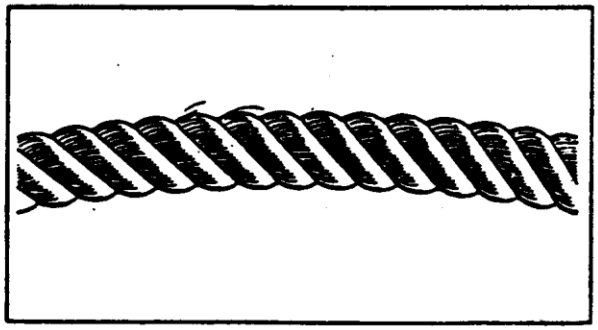

Figure 10 - "Bird Cages"

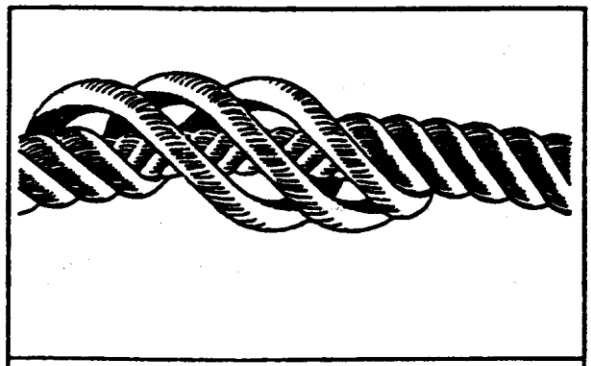

Figure 11 - Rope Kinks

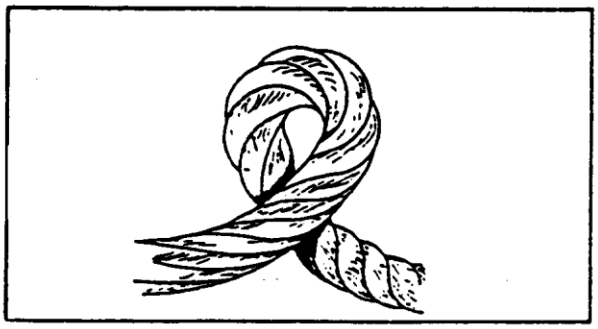


Saddle Mounts

34. Method of attachment.

    a. Any missing or ineffective fasteners.

    b. Loose mountings.

    c. Any cracks or breaks in a stress or load bearing member.

    d. Horizontal movement between upper and lower saddle mount halves exceeds 1/4 inch.

III EXHAUST SYSTEM

35. Any exhaust system determined to be leaking at a point forward of or directly below the driver/sleeper compartment.

36. A bus exhaust system leaking or discharging to the atmosphere-

    a. Gasoline powered - excess of 6 inches forward of the rearmost part of the bus.

    b. Other than gasoline powered - in excess of 15 inches forward of the rearmost part of the bus.

    c. Other than gasoline powered - forward of a door or window designed to be opened. (Exception: emergency exits).

No part of the exhaust system of any motor vehicle shall be so located as would likely to result in burning, charring, or damaging the electrical wiring, the fuel supply, or any combustible part of the motor vehicle.

IV. FUEL SYSTEM

****** THIS INCLUDES FUEL SYSTEMS ON REFRIGERATION UNITS, COMPRESSORS, GENERATORS OR ANY OTHER TYPE OF EQUIPMENT ATTACHED TO OR CARRIED ON A COMMERCIAL VEHICLE.**

37. A fuel system with a visible leak at any point.

38. A fuel tank filler cap missing.

39. A fuel tank not securely attached to the motor vehicle by reason of loose, broken or missing mounting bolts or brackets (some fuel tanks use springs or rubber bushings to permit movement).

V. LIGHTING DEVICES

40. All lighting devices and reflectors required by Lighting Section shall be operable.

All required lamps are listed in 393.11 (Lighting Chart) and must be capable of operation at all times! (393.9)

Item on the vehicle	Quantity	Color	Location	Position	Height above the road surface measured from the center of the lamp at curb weight	Vehicles for which the devices are required
Headlamps	2	White	Front	On the front at the same height, with an equal number at each side of the vertical center line as far apart as practicable.	Not less than 22 inches nor more than 54 inches.	A, B, C
Turn signal (front). See footnotes #2 and 12.	2	Amber	At or near the front.	One on each side of the vertical centerline at the same height and as far apart as practicable.	Not less than 15 inches nor more than83 inches.	A, B, C
Identification lamps (front). See footnote #1.	3	Amber	Front	As close as practicable to the top of the vehicle, at the same height, and as close as practicable to the vertical centerline of the vehicle (or the vertical centerline of the cab where different from the centerline of the vehicle) with lamp centers spaced not less than 152 mm (6 inches) or more than 305 mm (12 inches) apart. Alternatively, the front lamps may be located as close as practicable to the top of the cab.	All three on the same level as close as practicable to the top of the motor vehicle.	B, C
Tail lamps. See footnotes #5 and 11.	2	Red	Rear	One lamp on each side of the vertical centerline at the same height and as far apart as practicable.	Both on the same level between 15 inches and 72 inches.	A, B, C, D, E, F, G, H
Stop lamps. See footnotes #5 and 13.	2	Red	Rear	One lamp on each side of the vertical centerline at the same height and as far apart as practicable.	Both on the same level between 15 inches and 72 inches.	A, B, C, D, E, F, G

Item	Quantity	Color	Location	Position	Height	Vehicle
Clearance lamps. See footnotes #8, 9, 10, 15 & 17.	2	Amber	One on each side of the front of the vehicle.	One on each side of the vertical centerline to indicate overall width.	Both on the same level as high as practicable.	B, C, D, G, H
	2	Red	One on each side of the rear of the vehicle.	One on each side of the vertical centerline to indicate overall width.	Both on the same level as high as practicable.	B, D, G, H
Reflex reflector, intermediate (side).	2	Amber	One on each side.	At or near the midpoint between the front and rear side marker lamps, if the length of the vehicle is more than 9,144 mm (30 feet).	Between 15 inches and 60 inches.	A, B, D, F, G
Reflex reflector (rear). See footnotes #5, 6, and 8.	2	Red	Rear	One on each side of the vertical centerline, as far apart as practicable and at the same height.	Both on the same level, between 15 inches and 60 inches.	A, B, C, D, E, F, G
Reflex reflector (rear side).	2	Red	One on each side (rear).	As far to the rear as practicable.	Both on the same level, between 15 inches and 60 inches.	A, B, D, F, G
Reflex reflector (front side). See footnote #16.	2	Amber	One on each side (front).	As far to the front as practicable.	Between 15 inches and 60 inches.	A, B, C, D, F, G
License plate lamp (rear). See footnote #11.	1	White	At rear license plate to illuminate the plate from the top or sides.		No requirements	A, B, C, D, F, G
Side marker lamp (front). See footnote #16.	2	Amber	One on each side.	As far to the front as practicable.	Not less than 15 inches.	A, B, C, D, F
Side marker lamp intermediate.	2	Amber	One on each side.	At or near the midpoint between the front and rear side marker lamps, if the length of the vehicle is more than 9,144 mm (30 feet).	Not less than 15 inches.	A, B, D, F, G

Item	Quantity	Color	Location	Position	Height	Vehicle
Side marker lamp (rear). See footnotes #4 and 8.	2	Red	One on each side.	As far to the rear as practicable.	Not less than 15 inches, and on the rear of trailers not more than 60 inches.	A, B, D, F, G
Turn signal (rear). See footnotes #5 and 12.	2	Amber or red	Rear	One lamp on each side of the vertical centerline as far apart as practicable.	Both on the same level, between 15 inches and 83 inches.	A, B, C, D, E, F, G
Identification lamp (rear). See footnotes #3, 7, and 15.	3	Red	Rear	One as close as practicable to the vertical centerline. One on each side with lamp centers spaced not less than 152 mm (6 inches) or more than 305 mm (12 inches) apart.	All three on the same level as close as practicable to the top of the vehicle.	B, D, G
Vehicular hazard warning signal flasher lamps. See footnotes #5 and 12.	2	Amber	Front	One lamp on each side of the vertical centerline, as far apart as practicable.	Both on the same level, between 15 inches and 83 inches.	A, B, C
	2	Amber or red	Rear	One lamp on each side of the vertical centerline, as far apart as practicable.	Both on the same level, between 15 inches and 83 inches.	A, B, C, D, E, F, G
Backup lamp. See footnote #14.	1 or 2	White	Rear	Rear	No requirement	A, B, C
Parking lamp	2	Amber or white	Front	One lamp on each side of the vertical centerline, as far apart as practicable.	Both on the same level, between 15 inches and 83 inches.	A

Legend for types of commercial motor vehicles shown in the last column of the Lighting Chart.

A. Buses and trucks less than 80 inches in overall width.
B. Buses and trucks 80 inches or more in overall width.
C. Truck tractors.
D. Semitrailers and full trailers 80 inches or more in overall width except converter dollies.
E. Converter dolly.
F. Semitrailers and full trailers less than 80 inches in overall width.
G. Pole trailers.
H. Projecting loads.

Lighting Chart Footnotes

Note: Lamps and reflectors may be combined as permitted by §393.22 and S5.4 of 49 CFR 571.108, Equipment combinations.

Footnote-1 Identification lamps may be mounted on the vertical centerline of the cab where different from the centerline of the vehicle, except where the cab is not more than 42 inches wide at the front roofline, then a single lamp at the center of the cab shall be deemed to comply with the requirements for identification lamps. No part of the identification lamps or their mountings may extend below the top of the vehicle windshield.

Footnote-2 Unless the turn signals on the front are so constructed (double-faced) and located as to be visible to passing drivers, two turn signals are required on the rear of the truck tractor, one at each side as far apart as practicable.

Footnote-3 The identification lamps need not be visible or lighted if obscured by a vehicle in the same combination.

Footnote-4 Any semitrailer or full trailer manufactured on or after March 1, 1979, shall be equipped with rear side-marker lamps at a height of not less than 381 mm (15 inches), and on the rear of trailers not more than 1,524 mm (60 inches) above the road surface, as measured from the center of the lamp on the vehicle at curb weight.

Footnote-5 Each converter dolly, when towed singly by another vehicle and not as part of a full trailer, shall be equipped with one stop lamp, one tail lamp, and two reflectors (one on each side of the vertical centerline, as far apart as practicable) on the rear. Each converter dolly shall be equipped with rear turn signals and vehicular hazard warning signal flasher lamps when towed singly by another vehicle and not as part of a full trailer, if the converter dolly obscures the turn signals at the rear of the towing vehicle.

Footnote-6 Pole trailers shall be equipped with two reflex reflectors on the rear, one on each side of the vertical centerline as far apart as practicable, to indicate the extreme width of the trailer.

Footnote-7 Pole trailers, when towed by motor vehicles with rear identification lamps meeting the requirements of §393.11 and mounted at a height greater than the load being transported on the pole trailer, are not required to have rear identification lamps.

Footnote-8 Pole trailers shall have on the rearmost support for the load: (1) two front clearance lamps, one on each side of the vehicle, both on the same level and as high as practicable to indicate the overall width of the pole trailer; (2) two rear clearance lamps, one on each side of the vehicle, both on the same level and as high as practicable to indicate the overall width of the pole trailer; (3) two rear side marker lamps, one on each side of the vehicle, both on the same level, not less than 375 mm (15 inches) above the road surface; (4) two rear reflex reflectors, one on each side, both on the same level, not less than 375 mm (15 inches) above the road surface to indicate maximum width of the pole trailer; and (5) one red reflector on each side of the rearmost support for the load. Lamps and reflectors may be combined as allowed in §393.22.

Footnote-9 Any motor vehicle transporting a load which extends more than 102 mm (4 inches) beyond the overall width of the motor vehicle shall be equipped with the following lamps in addition to other required lamps when operated during the hours when headlamps are required to be used.
(1) The foremost edge of that portion of the load which projects beyond the side of the vehicle shall be marked (at its outermost extremity) with an amber lamp visible from the front and side.
(2) The rearmost edge of that portion of the load which projects beyond the side of the vehicle shall be marked (at its outermost extremity) with a red lamp visible from the rear and side.
(3) If the projecting load does not measure more than 914 mm (3 feet) from front to rear, it shall be marked with an amber lamp visible from the front, both sides, and rear, except that if the projection is located at or near the rear it shall be marked by a red lamp visible from front, side, and rear.

Footnote-10 Projections beyond rear of motor vehicles. Motor vehicles transporting loads which extend more than 1,219 mm (4 feet) beyond the rear of the motor vehicle, or which have tailboards or tailgates extending more than 1,219 mm (4 feet) beyond the body, shall have these projections marked as follows when the vehicle is operated during the hours when headlamps are required to be used:
(1) On each side of the projecting load, one red side marker lamp, visible from the side, located so as to indicate maximum overhang.
(2) On the rear of the projecting load, two red lamps, visible from the rear, one at each side; and two red reflectors visible from the rear, one at each side, located so as to indicate maximum width.

Footnote-11 To be illuminated when tractor headlamps are illuminated.

Footnote-12 Every bus, truck, and truck tractor shall be equipped with a signaling system that, in addition to signaling turning movements, shall have a switch or combination of switches that will cause the two front turn signals and the two rear signals to flash simultaneously as a vehicular traffic signal warning, required by §392-22(a). The system shall be capable of flashing simultaneously with the ignition of the vehicle on or off.

Footnote-13 To be actuated upon application of service brakes.

Footnote-14 Backup lamp required to operate when bus, truck, or truck tractor is in reverse.

Footnote-15
(1) For the purposes of Section 393.11, the term "overall width" refers to the nominal design dimension of the widest part of the vehicle, exclusive of the signal lamps, marker lamps, outside rearview mirrors, flexible fender extensions, and mud flaps.
(2) Clearance lamps may be mounted at a location other than on the front and rear if necessary to indicate the overall width of a vehicle, or for protection from damage during normal operation of the vehicle.
(3) On a trailer, the front clearance lamps may be mounted at a height below the extreme height if mounting at the extreme height results in the lamps failing to mark the overall width of the trailer.
(4) On a truck tractor, clearance lamps mounted on the cab may be located to indicate the width of the cab, rather than the width of the vehicle.
(5) When the rear identification lamps are mounted at the extreme height of a vehicle, rear clearance lamps are not required to be located as close as practicable to the top of the vehicle.

Footnote-16 A trailer subject to this part that is less than 1829 mm (6 feet) in overall length, including the trailer tongue, need not be equipped with front side marker lamps and front side reflex reflectors.

Footnote-17 A boat trailer subject to this part whose overall width is 2032 mm (80 inches) or more need not be equipped with both front and rear clearance lamps provided an amber (front) and red (rear) clearance lamp is located at or near the midpoint on each side so as to indicate its extreme width.

§393.87 Warning flags on projecting loads.

(a) Any commercial motor vehicle transporting a load which extends beyond the sides by more than 102 mm (4 inches) or more than 1,219 mm (4 feet) beyond the rear must have the extremities of the load marked with red or orange fluorescent warning flags. Each warning flag must be at least 457 mm (18 inches) square.

(b) **Position of flags**. There must be a single flag at the extreme rear if the projecting load is two feet wide or less. Two warning flags are required if the projecting load is wider than two feet. Flags must be located to indicate maximum width of loads which extend beyond the sides and/or rear of the vehicle.

NOTE: "Permitted Combinations" Two or more lighting devices may be combined optically if:

a. each device conforms to the rules

b. not inconsistent with rules or impairs effectiveness

"Prohibited Combinations" cannot be combined:

a. Headlamps and turn signal.

b. stop light and turn signal, unless turn signal has priority

c. clearance lamps, identification lamps and tail lamps must be separate lamps (***cannot be combined optically with each other***).

Visibility. Each lamp shall be located so that it meets the visibility requirements specified by FMVSS No. 108 in effect at the time of manufacture of the vehicle.

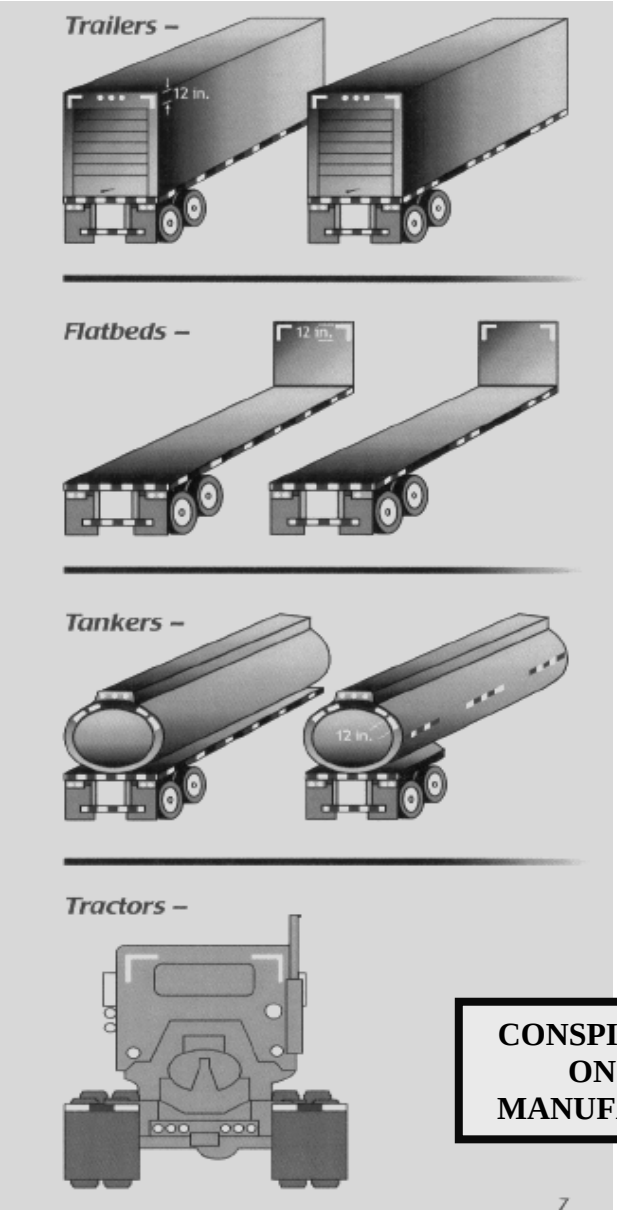
FMVSS 108 S5.1.3 No additional lamp, reflective device or other motor vehicle equipment shall be installed that impairs the effectiveness of lighting equipment required by FMVSS 108. Additional lamps installed within twice the spacing distance required of the ID lamps would be a violation of this standard.

CONSPICUITY TAPE REQUIREMENT

TRAILERS: All trailers and semitrailers **regardless of their date of manufacture**, which have an overall width of 80 inches or more and a gross vehicle weight rating of 10,001 pounds or more, except trailers that are manufactured exclusively for use as offices or dwellings, pole trailers, and trailers transported in a driveaway-towaway operation, must be equipped with retro-reflective sheeting or an array of reflex reflectors that meet the requirements of this section.
Tape must be either the full length of the vehicle, or you may space the tape. If your choose to space the tape you must have one piece at the very front and one piece at the extreme rear, and the rest of the tape must be evenly spaced between with at least 50% of the side covered. The tape on the rear must show full width of vehicle. Trailers manufactured on or after December 1, 1993, must also have conspicuity marking covering the full width of the horizontal member of the rear impact guard.

TRUCK-TRACTORS: MANUFACTURED AFTER 7/1/97 must have a red and white strip on each wheel flap bracket, and two L shaped white strips on each side of the rear, as close to the top of the body and as far apart as practicable.

Conspicuity tape is not required on any other vehicles.
Conspicuity tape may be used in lieu of required reflectors



CONSPICUITY TAPE REQUIRED ON TRUCK TRACTORS MANUFACTURED AFTER 07/1/97

MARKINGS OF LENSES AND LIGHT FIXTURES

A = Reflector

SAE S = Stop lamp

SAE Al or SAE I = Turn signal

SAE T = Tail lamp

SAE or SAE P = Clearance, side marker, identification and projecting load lamps

Combination lamps must be marked 'SAE' plus the letter indicating what the lamp is. For example:

SAE Al= Turn signal and reflector

VISIBILITY- all required lighting devices must be visible, between 50 feet and 500 feet when lights are required.

MOUNTING- all lights shall be permanently and securely mounted in a workman like manner, on a permanent part of the vehicle.

WIRING- must be grouped together, when possible, and protected by nonconductive tape, braid, or other covering. And be properly supported against, chaffing.

Note: SAE PC, PC2, or PC3 marking on lenses ---- may be used as front or rear clearance and side marker on trailer. These lamps may be mounted on the side near the front and/or near the rear. They must be visible from the front and/or rear.

VI. SAFE LOADING

42. Part(s) of vehicle or condition of loading such that the spare tire or any part of the load or dunnage can fall onto the roadway.

43. Protection against shifting cargo - any vehicle without a front-end structure or equivalent device as required.

All vehicles must be inspected for proper load securement, including enclosed vehicles. If vehicle is sealed the inspector would not be responsible to inspect load securement but must make a note on inspection form.

VII. STEERING MECHANISM

44. Steering wheel free play shall not exceed the following parameters.

Note: When checking vehicles equipped with power steering the engine must be running.

Steering wheel diameter	Manual steering system	Power steering system
406 mm or less **(16 inches or less)**	51 mm **(2 inches)**	108 mm **(4 1⁄4 inches)**
457 mm **(18 inches)**	57 mm **(2 1⁄4 inches)**	121 mm **(4 3⁄4 inches)**
483 mm **(19 inches)**	60 mm **(2 3⁄8 inches)**	127 mm **(5 inches)**
508 mm **(20 inches)**	64 mm **(2 1⁄2 inches)**	133 mm **(5 1⁄4 inches)**
533 mm **(21 inches)**	67 mm **(2 5⁄8 inches)**	140 mm **(5 1⁄2 inches)**
559 mm **(22 inches)**	70 mm **(2 3⁄4 inches)**	146 mm **(5 3⁄4 inches)**

To check steering wheel free play:

With the steer tires facing straight ahead, while watching the steer tire, move the steering wheel in one direction until you see the first movement of the tire. Stop and mark the steering wheel using a reference point such as the turn signal lever.
Next move the steering wheel in the opposite direction until you see the tire move. Stop and mark the steering wheel again using the same reference point.
Measure between the two marks following the contour of the steering wheel, and compare to the above chart. You must record the steering wheel diameter and amount of free play on the information form.

STEERING COLUMN

45. Any absence or looseness of U-bolt(s) or positioning part(s).

46. Worn, faulty or obviously repaired welded universal joint(s).

47. Steering wheel not properly secured, or
    - telescopic steering column does not lock into position, or
    - tilt steering column does not lock in at least one position..

FRONT AXLE BEAM AND ALL STEERING COMPONENTS OTHER THAN STEERING COLUMN

48. Any crack(s).

49. Any obviously welded repair(s).

STEERING GEAR BOX

50. Any mounting bolt(s) loose or missing.

51. Any crack(s) in gear box or mounting brackets.

PITMAN ARM

52. Any looseness of the pitman arm on the steering gear output shaft.

POWER STEERING

53. Auxiliary power assist cylinder loose.

BALL AND SOCKET JOINTS

54. Any movement under steering load of a stud nut.

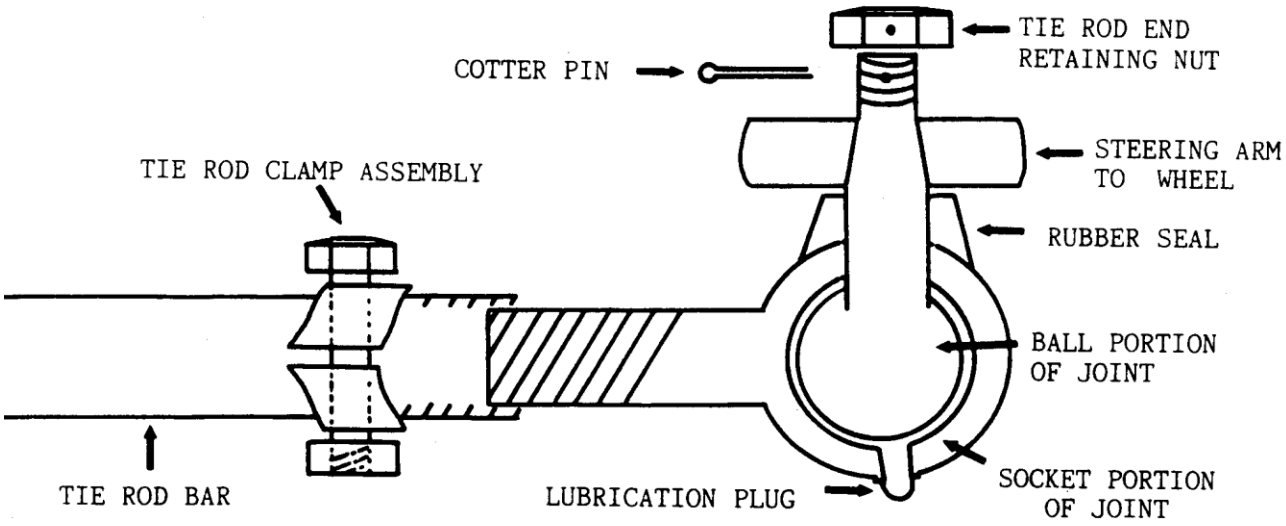
55. Any motion, other than rotational, between any linkage member and its attachment point of more than 1/4 inch. (more than 1/8 inch measured with hand pressure)

TIE RODS AND DRAG LINKS

56. Loose clamp(s) or clamp bolt(s) on tie rods or drag links.

57. Any looseness in any threaded joint.

58. Nut(s) loose or missing on tie rods, pitman arm, drag link, steering arm or tie rod arm.



STEERING SYSTEM

59. Any modification or other condition that interferes with free movement of any steering component.

Note: This includes tire touching frame, or any steering parts, belts slipping, weak power steering pump, or low fluid.

Vehicles equipped with hydraulic brakes that use the power steering pump as the source of power when engine is running should be tested as follows:

- Have engine running at idle
- Steer tires straight
- Make full brake application, and hold
- Grab steering wheel at the 2 o'clock position and rock to the 10 o'clock position
- If you discover any interference, binding, or you cannot move the steering wheel through the above mentioned arc the vehicle will fail the inspection

VIII. SUSPENSION

60. Any U-bolt(s), spring hanger(s), or other axle positioning part(s) cracked, broken, loose or missing resulting in shifting of an axle from its normal position.

After a turn, lateral axle displacement is normal with some suspensions. Forward or rearward operation in a straight line will cause the axle to return to alignment.

61. Spring Assembly

a. Any leaves in a leaf spring assembly broken or missing.

b. Any broken main leaf in a leaf spring assembly.
(Includes assembly with more than one main spring)

c. Coil spring broken.

d. Rubber spring missing.

e. One or more leaves displaced in a manner that could result in contact with a tire, rim, brake drum or frame.

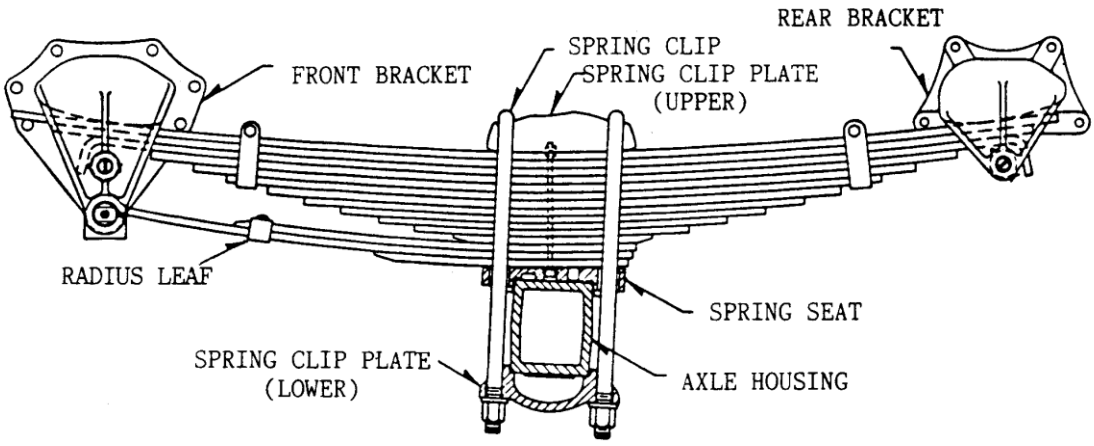
f. Broken torsion bar spring in a torsion bar suspension.

g. Deflated air suspension, i.e., system failure, leak, etc.
(Air suspension may lose up to 3 psi per 5 minutes)

62. Torque, Radius or Tracking Components.

Any part of a torque, radius or tracking component assembly or any part used for attaching the same to the vehicle frame or axle that is cracked, loose, broken or missing.

Do not apply to loose bushings in torque or track rods.



IX. FRAME

****** INCLUDING CROSS FRAME MEMBERS******

63. Frame Members

a. Any cracked, broken, loose or sagging frame member.

b. Any loose or missing fasteners including fasteners attaching functional component such as engine, transmission, steering gear, suspension, body parts, and fifth wheel.

64. Tire and Wheel Clearance

Any condition, including loading, that causes the body or frame to be in contact with a tire or any part of the wheel assemblies.

65. Adjustable Axle Assemblies (Sliding Subframes)

Adjustable axle assembly with locking pins missing or not engaged.

X. TIRES

66. Any tire on any steering axle of a power unit.

a. With less than 4/32 inch tread when measured at any point on a major tread groove.
NOTE: Tire tread depth must be recorded on the Vehicle Information Form

b. Has body ply or belt material exposed through the tread or sidewall.

c. Has any tread or sidewall separation.

d. Has a cut where the ply or belt material is exposed.

e. Labeled "Not for Highway Use" or displaying marking which would exclude use on steering axle.

f. A tube-type radial tire without radial tube stem markings.
These markings include a red band around the tube stem, the word "radial" embossed in metal stems, or the word "radial" molded in rubber stems.

g. Mixing bias and radial tires on the same axle.

h. Tire flap protrudes through valve slot in rim and touches stem.

i. Regrooved tire except motor vehicles used solely in urban or suburban service. (see exception in 393.75(e)).

j. Boot, blowout patch or other ply repair.

k. Weight carried exceeds tire load limit. This includes overloaded tire resulting from low air pressure.

l. Tire is flat or has noticeable (e.g., can be heard or felt) leak.
(50% or less of the cold rated pressure)
NOTE: Tire pressure must be recorded on the Vehicle Information Form

m. Any bus equipped with recapped or retreaded tire(s).

n. So mounted or inflated that it comes in contact with any part of the vehicle.

67. All tires other than on the steering axle of a power unit.

a. Weight carried exceeds tire load limit.
(This includes overloaded tire resulting from low air pressure).

b. Tire is flat or has noticeable (e.g., can be heard or felt) leak.
(50% or less of the cold rated pressure)
NOTE: Tire pressure must be recorded on the Vehicle Information Form

c. Has body ply or belt material exposed through the tread or sidewall.

d. Has any tread or sidewall separation.

e. Has a cut where ply or belt material is exposed.

f. So mounted or inflated that it comes in contact with any part of the vehicle.
(This includes a tire that contacts its mate.)

g. Is marked "Not for Highway Use" or otherwise marked and having like meaning.

h. With less than 2/32 inch tread when measured at any point on a major tread groove.
NOTE: Tire tread depth must be recorded on the Vehicle Information Form

XI. WHEELS AND RIMS

68. Lock or Side Ring
- Bent, broken, cracked improperly seated, sprung or mismatched ring(s).

69. Wheels and Rims
- Cracked or broken or has elongated bolt holes.

70. Fasteners (both spoke and disc wheels)
- Any loose, missing, broken, cracked, stripped or otherwise ineffective fasteners.

71. Welds.
a. Any cracks in welds attaching disc wheel disc to rim.

b. Any crack in welds attaching tubeless demountable rim to adapter.

c. Any welded repair on aluminum wheel(s)

d. Any welded repair other than disc to rim attachment on steel disc wheel(s)

XII. WINDSHIELD GLAZING

72. *Windshield condition.* With the exception of the conditions listed in paragraphs (c)(1), (c)(2), and (c)(3) of this section, each windshield shall be free of discoloration or damage in the area extending upward from the height of the top of the steering wheel (excluding a 51 mm (2 inch) border at the top of the windshield) and extending from a 25 mm (1 inch) border at each side of the windshield or windshield panel.

Exceptions:

(1) Coloring or tinting which meets the requirements of paragraph (d) of this section;

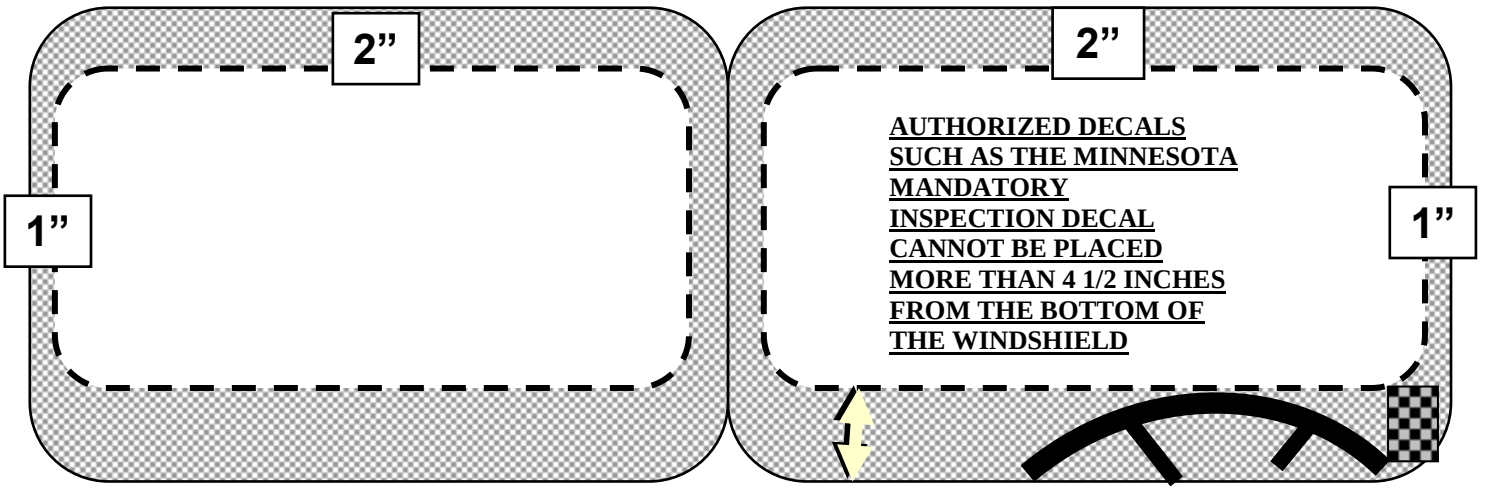
(2) Any crack that is not intersected by any other cracks;

(3) Any damaged area which can be covered by a disc 19 mm (¾ inch) in diameter if not closer than 76 mm (3 inches) to any other similarly damaged area.

(d) *Coloring or tinting of windshields and windows.* Coloring or tinting of windshields and the windows to the immediate right and left of the driver is allowed, provided the parallel luminous transmittance through the colored or tinted glazing is not less than 70 percent of the light at normal incidence in those portions of the windshield or windows which are marked as having a parallel luminous transmittance of not less than 70 percent. The transmittance restriction does not apply to other windows on the commercial motor vehicle.

(e) *Prohibition on obstructions to the driver's field of view*—(1) *Devices mounted at the top of the windshield.* Antennas, transponders, and similar devices must not be mounted more than 152 mm (6 inches) below the upper edge of the windshield. These devices must be located outside the area swept by the windshield wipers, and outside the driver's sight lines to the road and highway signs and signals.

(2) ***Decals and stickers mounted on the windshield.*** Commercial Vehicle Safety Alliance (CVSA) inspection decals, and stickers and/or decals required under Federal or State laws may be placed at the bottom or sides of the windshield provided such decals or stickers do not extend more than 115 mm **(4½ inches)** from the bottom of the windshield and are located outside the area swept by the windshield wipers, and outside the driver's sight lines to the road and highway signs or signals.



XIII. WINDSHIELD WIPERS/WASHERS AND DEFROSTER

Any power unit that has an inoperative wiper, or missing or damaged parts that render it ineffective.

(a) Vehicles manufactured on or after December 25, 1968.
Each bus, truck, and truck-tractor manufactured on or after December 25, 1968, must have a windshield wiping system that meets the requirements of FMVSS No. 104 (S4.1) in effect on the date of requirements of FMVSS No. 104 (S4.2.2) in effect on the date of manufacture.

(b) Vehicles manufactured between June 30, 1953, and December 24, 1968.
Each truck, truck-tractor, and bus manufactured between June 30, 1953, and December 24,1968, shall be equipped with a power-driven windshield wiping system with at least two wiper blades, one on each side of the centerline of the windshield. Motor vehicles which depend upon vacuum to operate the windshield wipers, shall have the wiper system constructed and maintained such pressure that the performance of the wipers will not be adversely affected by a change in the intake manifold

Any power unit that has a defective, ineffective or no defroster device

(a) Vehicles manufactured on or after December 25, 1968.
Each bus, truck, and truck-tractor manufactured on or after December 25, 1968, must have a windshield defrosting and defogging system that meets the requirements of FMVSS No. 103 in effect on the date of manufacture.

(b) Vehicles manufactured before December 25, 1968.
Each bus, truck, and truck-tractor manufactured before December 25, 1968 shall be equipped with a means for preventing the accumulation of ice, snow, frost, or condensation that could obstruct the driver's view through the windshield while the vehicle is being driven.

XIV. ADDITIONAL INSPECTION ITEMS

1. REAR VISION MIRRORS

Every bus, truck, and truck tractor shall be equipped with two rear-vision mirrors, one at each side, firmly attached to the outside of the motor vehicle, and so located as to reflect to the driver a view of the highway to the rear, along both sides of the vehicle. All such regulated rear-vision mirrors and their replacements shall meet, as a minimum, the requirements of FMVSS No. 111 (49 CFR §571.111) in force at the time the vehicle was manufactured.

2. HORN

Every bus, truck, truck tractor, and every driven motor vehicle in driveaway towaway operations shall be equipped with a horn and actuating elements which shall be in such condition as to give an adequate and reliable warning signal.

3. FIRE EXTINGUISHER & EMERGENCY TRIANGLES

Each truck, truck tractor, and bus (except those towed in driveaway-towaway operations) must be equipped as follows

a. A power unit that is used to transport hazardous materials in a quantity that requires placarding (See §177.823 of this title) must be equipped with a fire extinguisher having an Underwriters' Laboratories rating of 10 B:C or more.
b. A power unit that is not used to transport hazardous materials must be equipped with either: A fire extinguisher having an Underwriters' Laboratories rating of 5 B:C or more; or (a)(1)(ii)(B) Two fire extinguishers, each of which has an Underwriters' Laboratories rating of 4 B:C or more.
c. Labeling and marking**.** Each fire extinguisher required by this section must be labeled or marked by the manufacturer with its Underwriters' Laboratories rating.
d. Visual Indicators. The fire extinguisher must be designed, constructed, and maintained to permit visual determination of whether it is fully charged.
e. Condition, location, and mounting. The fire extinguisher(s) must be filled and located so that it is readily accessible for use. The extinguisher(s) must be securely mounted to prevent sliding, rolling, or vertical movement relative to the motor vehicle.

4. WARNING DEVICES for stopped vehicles.

Except as provided in paragraph (d) of this section, one of the following options must be used:

a. Three bidirectional emergency reflective triangles that conform to the requirements of Federal Motor Vehicle Safety Standard No. 125, §571.125 of this title; or
b. At least 6 fusees or 3 liquid-burning flares. The vehicle must have as many additional fusees or liquid-burning flares as are necessary to satisfy the requirements of §392.22.
c. Other warning devices may be used in addition to, but not in lieu of, the required warning devices, provided those warning devices do not decrease the effectiveness of the required warning devices.
d. Restrictions on the use of flame producing devices. Liquid burning flares, fusees, oil lanterns, or any signal produced by a flame shall not be carried on any commercial motor vehicle transporting Division 1.1, 1.2, 1.3 (explosives) hazardous materials; any cargo tank motor vehicle used for the transportation of Division 2.1 (flammable gas) or Class 3 (flammable liquid) hazardous materials whether loaded or empty; or any commercial motor vehicle using compressed gas as a motor fuel.

4. REAR IMPACT GUARDS and REAR END PROTECTION

(a)(1) General requirements for trailers and semitrailers manufactured on or after January 26, 1998. Each trailer and semitrailer with a gross vehicle weight rating of 4,536 kg (10,000 pounds) or more, and manufactured on or after January 26, 1998, must be equipped with a rear impact guard that meets the requirements of Federal Motor Vehicle Safety Standard No. 223 (49 CFR 571.223) in effect at the time the vehicle was manufactured. When the rear impact guard is installed on the trailer or semitrailer, the vehicle must, at a minimum, meet the requirements of FMVSS No. 224 (49 CFR 571.224) in effect at the time the vehicle was manufactured. The requirements of paragraph (a) of this section do not apply to pole trailers (as defined in §390.5 of this chapter); pulpwood trailers, low chassis vehicles, special purpose vehicles, wheels back vehicles (as defined in §393.5); and trailers towed in driveaway-towaway operations (as defined in §390.5).

(a)(2) Impact guard width. The outermost surfaces of the horizontal member of the guard must extend to within 100 mm (4 inches) of the side extremities of the vehicle. The outermost surface of the horizontal member shall not extend beyond the side extremity of the vehicle.

(a)(3) Guard height. The vertical distance between the bottom edge of the horizontal member of the guard and the ground shall not exceed 560 mm (22 inches) at any point across the full width of the member. Guards with rounded corners may curve upward within 255 mm (10 inches) of the longitudinal vertical planes that are tangent to the side extremities of the vehicle.

(a)(4) Guard rear surface. At any height 560 mm (22 inches) or more above the ground, the rearmost surface of the horizontal member of the guard must be within 305 mm (12 inches) of the rear extremity of the vehicle. This paragraph shall not be construed to prohibit the rear surface of the guard from extending beyond the rear extremity of the vehicle. Guards with rounded corners may curve forward within 255 mm (10 inches) of the side extremity.

(a)(5) Cross-sectional vertical height. The horizontal member of each guard must have a cross sectional vertical height of at least 100 mm (3.94 inches) at any point across the guard width.

Note: On belly dump or side dump trailers equipped with a push block, the push block is considered to be the rear of the vehicle. Therefore, all measurements should be taken at the rear of the push block.

(a)(6) Certification and labeling requirements for rear impact protection guards. Each rear impact guard used to satisfy the requirements of paragraph (a)(1) of this section must be permanently marked or labeled as required by FMVSS No. 223 (49 CFR 571.223, S5.3). The label must be on the forward-facing surface of the horizontal member of the guard, 305 mm (12 inches) inboard of the right end of the guard. The certification label must contain the following information:

(a)(6)(i) The impact guard manufacturer's name and address;

(a)(6)(ii) The statement "Manufactured in ____" (inserting the month and year that the guard was manufactured); and,

(a)(6)(iii) The letters "DOT", constituting a certification by the guard manufacturer that the guard conforms to all requirements of FMVSS No. 223.

NOTE: If the certification label is missing, record the defect on the information form. DO NOT fail the vehicle because of a missing certification label.

Special purpose vehicle. (1) A trailer or semitrailer manufactured on or after January 26, 1998, having work-performing equipment that, while the motor vehicle is in transit, resides in or moves through the area that could be occupied by the horizontal member of the rear impact guard, as defined by the guard width, height and rear surface requirements of §571.224 (paragraphs S5.1.1 through S5.1.3), in effect on the date of manufacture, or a subsequent edition.

(2) A motor vehicle, not described by paragraph (1) of this definition, having work-performing equipment that, while the motor vehicle is in transit, resides in or moves through the area that could be occupied by the horizontal member of the rear impact guard, as defined by the guard width, height and rear surface requirements of §393.86(b)(1).

Low chassis vehicle. (1) A trailer or semitrailer manufactured on or after January 26, 1998, having a chassis which extends behind the rearmost point of the rearmost tires and which has a lower rear surface that meets the guard width, height, and rear surface requirements of §571.224 in effect on the date of manufacture, or a subsequent edition.

(2) A motor vehicle, not described by paragraph (1) of this definition, having a chassis which extends behind the rearmost point of the rearmost tires and which has a lower rear surface that meets the guard configuration requirements of §393.86(b)(1).

(b)(1) Requirements for motor vehicles manufactured after December 31, 1952 (except trailers or semitrailers manufactured on or after January 26, 1998). Each motor vehicle manufactured after December 31, 1952, (except truck tractors, pole trailers, pulpwood trailers, or vehicles in driveaway-towaway operations) in which the vertical distance between the rear bottom edge of the body (or the chassis assembly if the chassis is the rearmost part of the vehicle) and the ground is greater than 76.2 cm (30 inches) when the motor vehicle is empty, shall be equipped with a rear impact guard(s). The rear impact guard(s) must be installed and maintained in such a manner that:

(b)(1)(i) The vertical distance between the bottom of the guard(s) and the ground does not exceed 76.2 cm (30 inches) when the motor vehicle is empty;

(b)(1)(ii) The maximum lateral distance between the closest points between guards, if more than one is used, does not exceed 61 cm (24 inches);

(b)(1)(iii) The outermost surfaces of the horizontal member of the guard are no more than 45.7 cm (18 inches) from each side extremity of the motor vehicle;

(b)(1)(iv) The impact guard(s) are no more than 61 cm (24 inches) forward of the rear extremity of the motor vehicle.

Note: On belly dump or side dump trailers equipped with a push block, the push block is considered to be the rear of the vehicle. Therefore, all measurements should be taken at the rear of the push block.

(b)(2) Construction and attachment. The rear impact guard(s) must be substantially constructed and attached by means of bolts, welding, or other comparable means.

(b)(3) Vehicle components and structures that may be used to satisfy the requirements of paragraph (b) of this section. Low chassis vehicles, special purpose vehicles, or wheels back vehicles constructed and maintained so that the body, chassis, or other parts of the vehicle provide the rear end protection comparable to impact guard(s) conforming to the requirements of paragraph (b)(1) of this section shall be considered to be in compliance with those requirements.

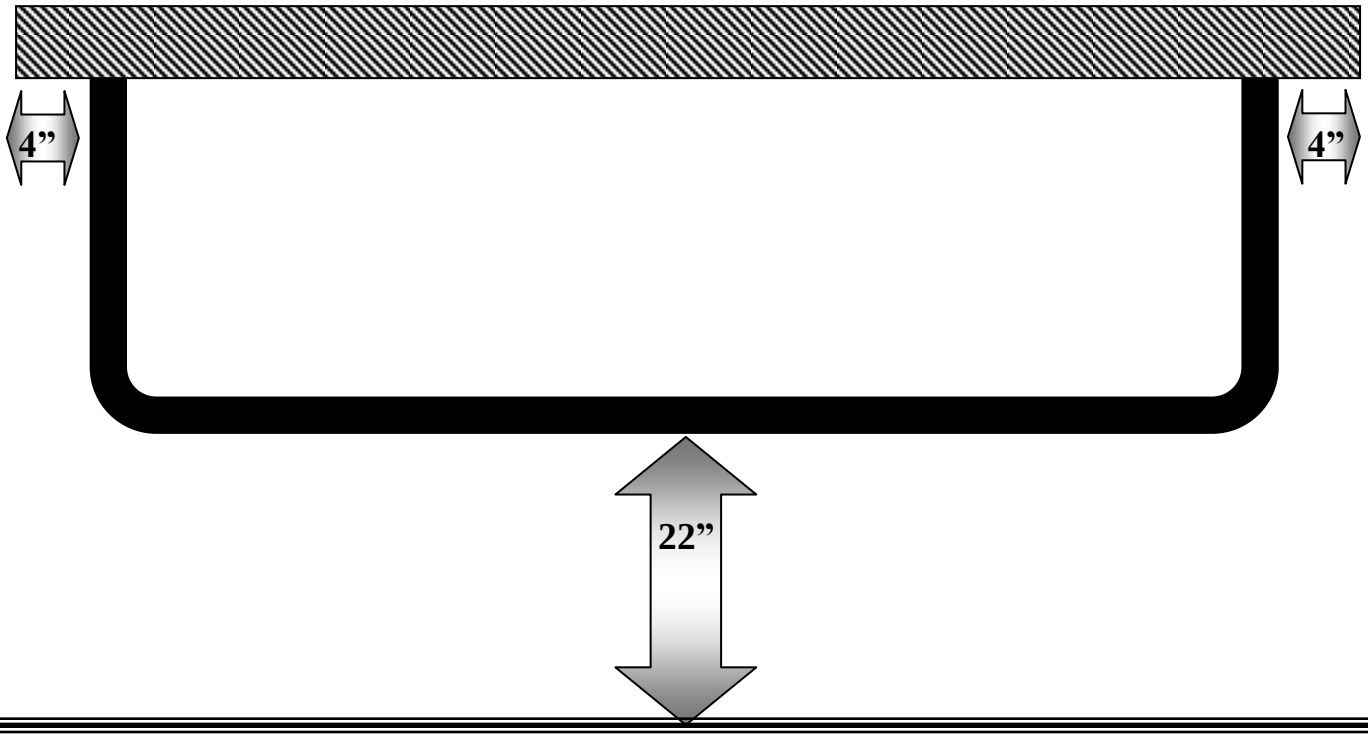
Wheels back vehicle.

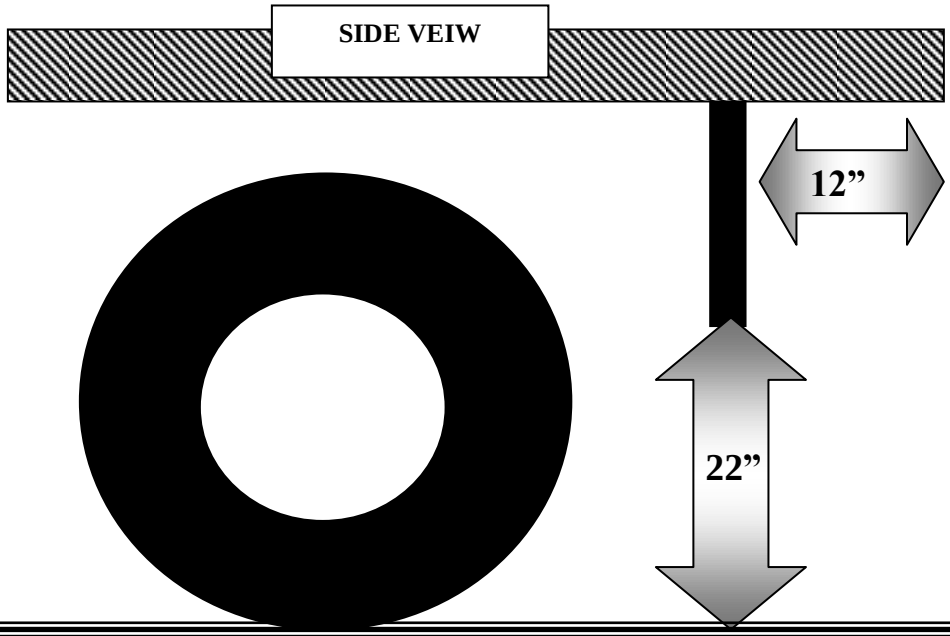
(1) A trailer or semitrailer manufactured on or after January 26, 1998, whose rearmost axle is permanently fixed and is located such that the rearmost surface of the tires (of the size recommended by the vehicle manufacturer for the rear axle) is not more than 305 mm (12 inches) forward of the transverse vertical plane tangent to the rear extremity of the vehicle.

(2) A motor vehicle, not described by paragraph (1) of this definition, whose rearmost axle is permanently fixed and is located such that the rearmost surface of the tires (of the size recommended by the vehicle manufacturer for the rear axle) is not more than 610 mm (24 inches) forward of the transverse vertical plane tangent to the rear extremity of the vehicle.

General requirements for trailers and semitrailers manufactured on or after January 26, 1998.

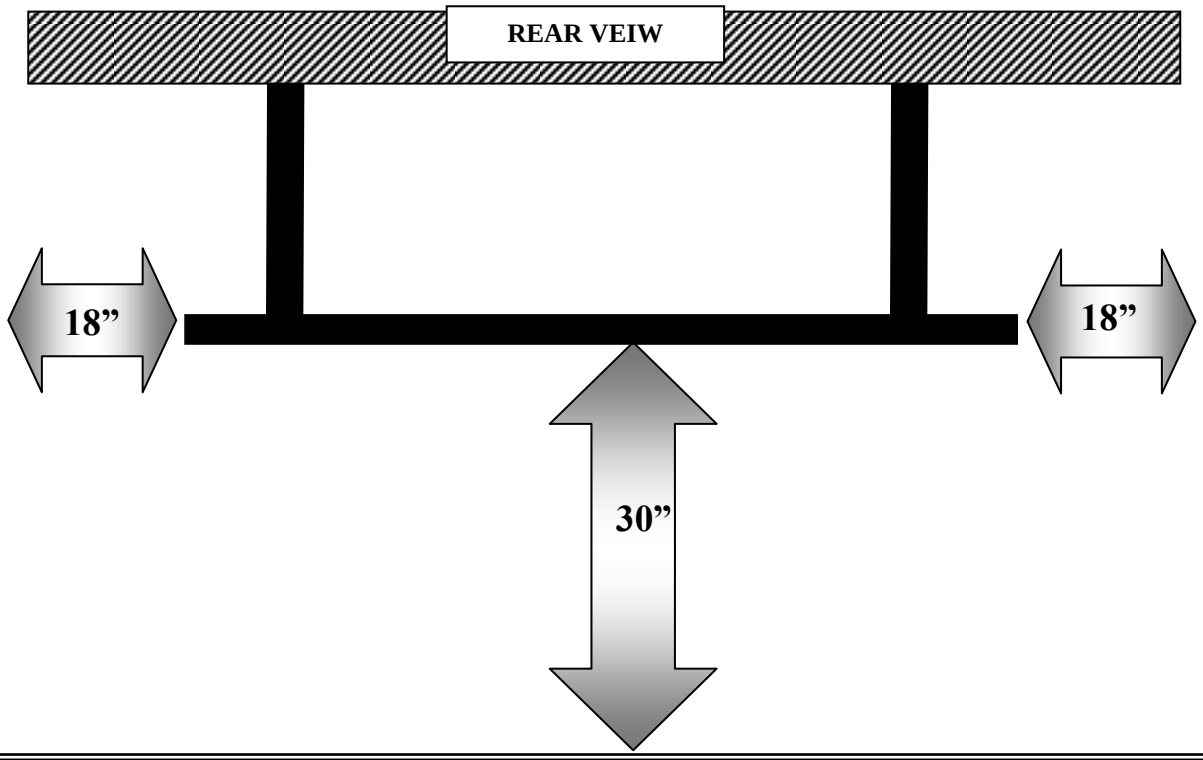
Each trailer and semitrailer with a gross vehicle weight rating of 4,536 kg (10,000 pounds) or more, and manufactured on or after January 26, 1998, must be equipped with a rear impact guard that meets the requirements of Federal Motor Vehicle Safety Standard No. 223 (49 CFR 571.223)

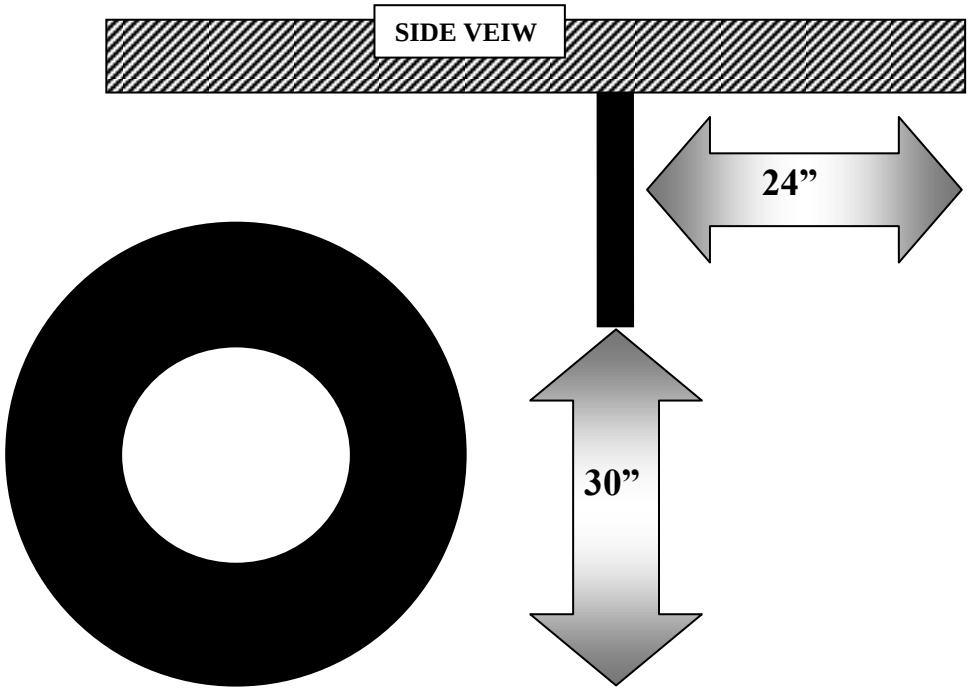




.

Requirements for motor vehicles manufactured after December 31, 1952
(except trailers or semitrailers manufactured on or after January 26, 1998).





ATTENTION!!!

If you are inspecting a rear-end dump farm truck, there are some exemptions that could apply.

WHEEL FLAPS ON TRUCKS AND TRAILERS 169.733

Subdivision 1. Vehicles generally**.** Every truck, truck-tractor, trailer, semitrailer, pole trailer, and rear-end dump truck, **excepting rear-end dump farm trucks**, must be provided with wheel flaps or other suitable protection above and behind the rearmost wheels of the vehicle or combination of vehicles to prevent, as far as practicable, the wheels from throwing dirt, water, or other materials on the windshields of following vehicles. The flaps or protectors must be at least as wide as the tires they are protecting and have a ground clearance of not more than nine inches from the ground when the vehicle is empty.

REAR-END PROTECTION 221.031 (2a)

(b) A rear-end dump truck or other rear-unloading truck while being used for hauling agricultural and other farm products from a place of production or on-farm storage site to a place of processing or storage, is not subject to any rule of the commissioner requiring rear-end protection, including a federal regulation adopted by reference.

This vehicle must be used by a private carrier and used intrastate only and we highly recommend that a copy of the inspection form is carried in the vehicle. This exception applies only to straight trucks; not trailers or semi-trailers.

If the vehicle you are inspecting meets the above mentioned qualifications, you must cross out the information at the bottom of the inspection report that reads
"THIS VEHICLE IS IN COMPLIANCE WITH 49 CFR 396.17 APPENDIX G"
and write on the bottom of the inspection form
"FARM VEHICLE INTRASTATE ONLY".
Additionally, you should not punch out the location on the decal that states:
"This vehicle is in compliance with 49 CFR 396.17 Appendix G Periodic Annual Inspection"

6. CAB AND BODY COMPONENTS

a. The cab compartment doors or door parts used as an entrance or exit shall not be missing or broken. Doors shall not sag so that they cannot be properly opened or closed. No door shall be wired shut or otherwise secured in the closed position so that it cannot be readily opened. Exception: When the vehicle is loaded with pipe or bar stock that blocks the door and the cab has a roof exit.

b. Bolts or brackets securing the cab or the body of the vehicle to the frame shall not be loose, broken, or missing.

c. The hood must be securely fastened.

d. All seats must be securely mounted.

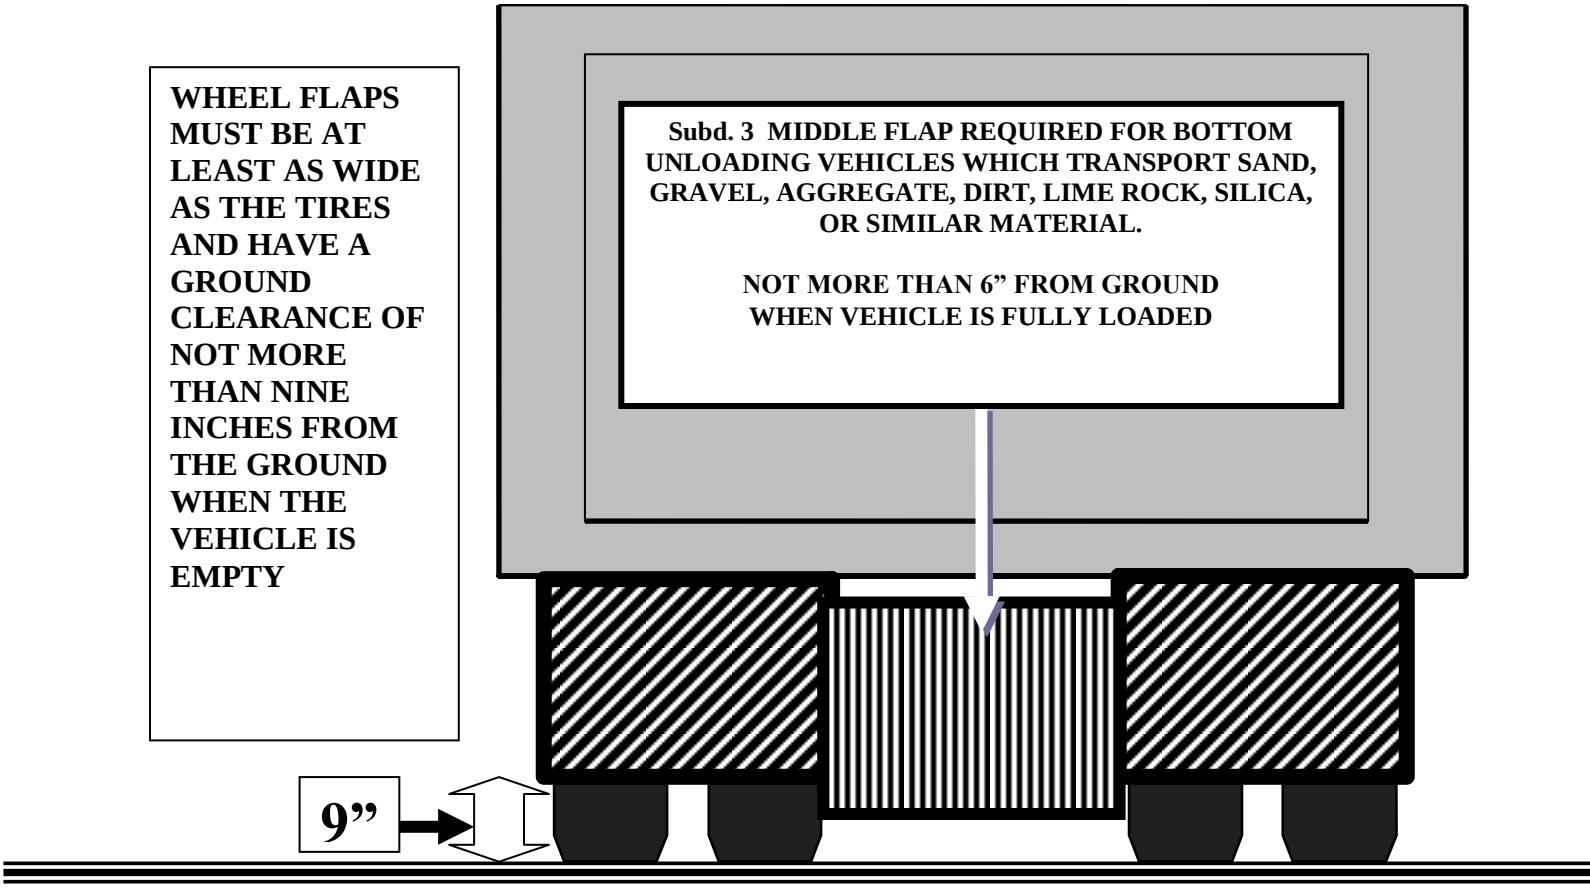
e. The front bumper must not be missing, loosely attached, or protruding beyond the confines of the vehicle so as to create a hazard.

7. BUS/ MOTORCOACH

Emergency exits and push-out windows checked and operational.
Push-out windows. Each push-out window shall be releasable by operating no more than two mechanisms and allow manual release of the exit by a single occupant.
Initial YES on the Inspection Information Form if there were no defects

8. WHEEL FLAPS ON TRUCKS AND TRAILERS

Subdivision 1. **Vehicles generally.** Every truck, truck-tractor, trailer, semitrailer, pole trailer, and rear-end dump truck, **excepting rear-end dump farm trucks**, must be provided with wheel flaps or other suitable protection above and behind the rearmost wheels of the vehicle or combination of vehicles to prevent, as far as practicable, the wheels from throwing dirt, water, or other materials on the windshields of following vehicles. The flaps or protectors must be at least as wide as the tires they are protecting and have a ground clearance of not more than nine inches from the ground when the vehicle is empty.



Subd. 4. Alternative requirements. If the motor vehicle is so designed and constructed that the above requirements are accomplished by means of body construction or other means of enclosure, then no protectors or flaps are required.

Subd. 5. Extended flaps. If the rear wheels are not covered at the top by fenders, body or other parts of the vehicle, the flap or other protective means must be extended at least to a point directly above the center of the rearmost axle.

XV. INSTRUCTIONS FOR USE OF DECALS

The Minnesota decal is issued to inspectors by serial number.

Decals are not transferable and cannot be used by any other inspector or person.

With a hole punch, punch the month you performed the inspection. Also punch the box to indicate the vehicle is in compliance.

Absolutely no decal is to be applied to a vehicle unless the vehicle has passed the entire inspection.

Minnesota decals can only be affixed to commercial vehicles registered in Minnesota, and Special Mobile Equipment that qualifies.

Decals cannot be placed on any other vehicle.

You must affix the decal as follows:

TRUCKS AND TRUCK-TRACTORS: Affixed to the lower left, exterior surface of the drivers side windshield.

NOT MORE THAN 4 ½" FROM THE BOTTOM OF THE WINDSHIELD

TRAILERS: Affixed to the left **side** of trailer as close to the front corner as possible.

BUS: Affixed to the lower right front corner of the windshield, or on the bus body directly below the right rear-view mirror..

Alternate location for decal: If necessary, you may place the decal on the inside of the windshield at the same location as above. After punching out the month and **writing the complete VIN on the decal** with a permanent marker, such as a "Sanford Sharpie". The decal must be taped on the inside with **clear Mylar tape** covering all four edges **completely**.

Inspectors must affix a decal to each vehicle that passes an inspection

YOU MUST REMOVE ALL EXPIRED DECALS FROM THE VEHICLE

ADDITIONAL INFORMATION

(INFORMATION ONLY- not to be included in the Minnesota Mandatory Inspection)

169.79 VEHICLE REGISTRATION; DISPLAYING LICENSE PLATES.

Subd. 7. **Plate fastened and visible.**
All plates must be:
(1) securely fastened so as to prevent them from swinging,
(2) displayed horizontally with the identifying numbers and letters facing outward from the vehicle, and
(3) mounted in the upright position.
The person driving the motor vehicle shall keep the plate legible and unobstructed and free from grease, dust, or other blurring material so that the lettering is plainly visible at all times. It is unlawful to cover any assigned letters and numbers or the name of the state of origin of a license plate with any material whatever, including any clear or colorless material that affects the plate's visibility or reflectivity.

169.83 MUFFLER

Every motor vehicle shall at all times be equipped with a muffler in good working order which blends the exhaust noise into the overall vehicle noise and is in constant operation to prevent excessive or unusual noise, and no person shall use a muffler cutout, bypass, or similar device upon a motor vehicle on a street or highway. The exhaust system shall not emit or produce a sharp popping or crackling sound. Every motor vehicle shall at all times be equipped with such parts and equipment so arranged and kept in such state of repair as to prevent carbon monoxide gas from entering the interior of the vehicle.

No person shall have for sale, sell or offer for sale or use on any motor vehicle any muffler that fails to comply with the specifications as required by the commissioner of public safety.

CHANGE OF INFORMATION

Inspectors must notify the State Patrol IMMEDIATELY of any change of information, such as

- -Business address change
- -Change of business name
- -Inspector name change
- -Change of employment
- -Discontinued employment

Change of Employment and Change of Address forms are available at the website-

msp.dps.mn.gov

OR

dps.mn.gov/divisions/msp/commercial-vehicles

Transporting hazardous materials under the
"Materials of Trade" (MOTs) exception: (49CFR 173.6)

- Must have general knowledge of MOTs regulations
- Quantity limitations – Max of 440 lbs. total MOTs
- Packaging requirements
- Marking and labeling requirements

All MOTs must be securely closed, secured against movement, protected against damage and leak tight.

Common uses:

- **Gasoline** – maximum container size 8 gallons, must be marked gasoline, must be in a DOT or OSHA approved container
- **Gases in cylinders** – max cylinders size 220 lbs., must be labeled per HM regulations.
- **Acids** – maximum container size 8 gallons

MOTs do not require:

- Shipping papers
- Emergency response information
- Placarding
- Formal training or recordkeeping

NOTE: Gasoline may NOT be transported in pickup box tanks unless built to a DOT specification and marked as such. Diesel fuel may be transported in these containers.

Complete information for transporting hazardous materials under the MOTs exception can be found in 49CFR 173.6
